- List of contributors
- Preface

- **Part A: Modern technological advancements in the field of animal experimentation**

- **Chapter 1. Emerging techniques in biological sciences**
- Abstract
- 1.1 Introduction
- 1.2 Artificial Intelligence
- 1.3 Imaging cells to molecules in 3D
- 1.4 Microarray
- 1.5 Genetic engineering with precision
- 1.6 Omics technologies
- 1.7 Informatics and simulations
- 1.8 Automation and miniaturization of experiments
- 1.9 BioMEMS (Biomedical micro electro-mechanical systems in biology)
- References

- **Chapter 2. Molecular basis of animal systematics including barcoding**
- Abstract
- 2.1 Introduction
- 2.2 Morphological systematics and its shortcomings
- 2.3 Molecular markers
- 2.4 DNA barcoding: an effective technique in molecular systematics
- 2.5 Concluding remarks
- References

- **Chapter 3. Mitochondrial DNA: a tool for elucidating molecular phylogenetics and population**
- Abstract
- 3.1 Size of mtDNA in different livestock species
- 3.2 Mitochondrial DNA vis a vis genomic DNA
- 3.3 Mitochondrial DNA as genetic marker
- 3.4 Mitochondrial DNA as a molecular clock
- 3.5 Domestication of livestock species and mitochondrial DNA
- 3.6 Challenges and future prospects

- References

- **Chapter 4. Somatic cell nuclear transfer in cellular medicine and biopharming**
 - Abstract
 - Highlights
 - 4.1 Introduction
 - 4.2 SCNT as potent genome reprogramming tool
 - 4.3 Cloned transgenic animals
 - 4.4 Development of therapeutic cells
 - 4.5 Biopharming using cloned transgenic animals
 - 4.6 Outlook and challenges
 - References

- **Chapter 5. Animal cloning: perspectives for futuristic medicine**
 - Abstract
 - 5.1 Introduction
 - 5.2 Cloning by somatic cell nuclear transfer
 - 5.3 Molecular/gene cloning
 - 5.4 Human reproductive cloning
 - 5.5 Risk of cloning
 - 5.6 Ethical issues of human cloning
 - 5.7 Conclusion
 - References

- **Chapter 6. CRISPR/Cas9 system and prospects in animal modeling of neurodegenerative diseases**
 - Abstract
 - 6.1 Introduction
 - 6.2 Background and basic technique
 - 6.3 Technique basics
 - 6.4 Applications of CRISPR/Cas9 technology
 - 6.5 CRISPR-Cas9 in neurodegenerative diseases
 - 6.6 Challenges, limitations and adaptations in CRISPR/Cas9 technique
 - 6.7 Conclusion
 - References

- **Chapter 7. Semen quality biomarkers for improvement of production in livestock**
 - Abstract
 - 7.1 Introduction
 - 7.2 Canonical methods of semen quality evaluation
 - 7.3 Biochemical evaluation
 - 7.4 Microscopic examination
 - 7.5 Computer-assisted semen analysis
 - 7.6 Flow cytometry
 - 7.7 Sperm RNA(s) as semen quality biomarker
 - 7.8 Sperm DNA methylation as semen quality biomarker
 - 7.9 Sperm SNPs as semen quality biomarkers

- 7.10 Sperm proteins as semen quality biomarker
- References
- **Part B: Animal modeling and its applications**
- **Chapter 8. Animal models and their substitutes in biomedical research**
 - Abstract
 - 8.1 Introduction
 - 8.2 Alternatives to animal models in scientific research
 - 8.3 Concluding remarks
 - References
 - Further reading
- **Chapter 9. Experimental models for investigating the pathogenesis of heart failure**
 - Abstract
 - 9.1 Introduction
 - 9.2 Myocardial ischemia induced heart failure
 - 9.3 Hemodynamic overload-induced heart failure
 - 9.4 Pressure overload-induced models
 - 9.5 Tachycardia-induced heart failure model
 - 9.6 Genetic cardiomyopathy model of heart failure
 - 9.7 Concluding remarks
 - Acknowledgments
 - Conflict of interest
 - References
- **Chapter 10. Animal models of inflammatory musculoskeletal diseases for tissue engineering and regenerative medicine: updates and translational application**
 - Abstract
 - 10.1 Introduction
 - 10.2 Musculoskeletal tissue engineering
 - 10.3 Animal models in biomedical research
 - 10.4 Challenges and perspective
 - Acknowledgments
 - Conflict of interests
 - References
- **Chapter 11. Selection of experimental models mimicking human pathophysiology for diabetic microvascular complications**
 - Abstract
 - 11.1 Introduction
 - 11.2 Diabetic nephropathy
 - 11.3 Diabetic neuropathy
 - 11.4 Diabetic retinopathy
 - 11.5 Discussion
 - 11.6 Summary
 - References

- **Chapter 12. Exploration on different animal models used in drug-induced adverse reactions research; current scenario and further prospectives**
 - Abstract
 - 12.1 Introduction
 - 12.2 Animal models used in research
 - 12.3 Studies of adverse drug reactions associated with different drugs on different animal models
 - 12.4 Common adverse reactions of drugs
 - 12.5 Conclusions and recommendations
 - References

- **Chapter 13. Animal models for hepatotoxicity**
 - Abstract
 - 13.1 Introduction
 - 13.2 Classification of animal models for hepatotoxicity
 - Acknowledgment
 - References

- **Chapter 14. Drosophila embryo as experimental model: lessons learnt from genes in axis formation**
 - Abstract
 - 14.1 Introduction
 - 14.2 Anterior-posterior axis formation in Drosophila
 - 14.3 Dorsal-ventral axis formation in Drosophila melanogaster
 - 14.4 Concluding remarks
 - References

- **Part C: Animal diversity and conservation**

- **Chapter 15. Exploration of biological science in extreme environment: an Indian experience at the Arctic**
 - Abstract
 - 15.1 Long-term objectives
 - 15.2 Short-term objectives
 - References

- **Chapter 16. Parlance of insect systematics: from classical to molecular—the journey has been long**
 - Abstract
 - 16.1 Introduction
 - 16.2 Classical taxonomy-morphological attributes
 - 16.3 New trends
 - 16.4 Larval taxonomy/embryology
 - 16.5 Eco-taxonomy
 - 16.6 Ethological taxonomy
 - 16.7 Cytotaxonomy
 - 16.8 Molecular taxonomy
 - 16.9 Identification of members of a target group of species
 - 16.10 Identification of disease causing agents
 - 16.11 Phylogeny and classification

- 16.12 Conclusion and discussion
- 16.13 Status of insect taxonomy in India
- 16.14 Need of the hour
- 16.15 Networking between different research institutions
- References

- **Chapter 17. Parasites in a changing world**
- Abstract
- 17.1 Introduction
- 17.2 Parasites and wildlife
- 17.3 Parasites in farming systems
- 17.4 Zoonotic parasitic diseases
- 17.5 Conclusion
- References

- **Chapter 18. Ambient ecological conditions of the Gangetic dolphin-*Platanista gangetica gangetica* of river Ganga, between Varanasi to Farakka**
- Abstract
- 18.1 Introduction
- 18.2 Field survey and habitat related protocols
- 18.3 Result and discussion
- 18.4 Dolphin status and distribution
- 18.5 Conclusion and recommendations
- References

- **Chapter 19. Entomopathogenic nematode in national development through enhancing the socio-economic condition of Indian farmers**
- Abstract
- 19.1 Introduction
- 19.2 Historical approach of EPN
- 19.3 Major techniques/important observations
- 19.4 Nematode species and target insect pests
- 19.5 Entomopathogenic nematodes based formulations
- 19.6 Formulation development at Chaudhary Charan Singh University, Meerut
- 19.7 Applications of entomopathogenic nematodes-based formulation
- 19.8 Summary
- Acknowledgment
- Declaration
- References
- Further reading

- **Chapter 20. Molecular studies of pest termites in India**
- Abstract
- 20.1 Introduction
- 20.2 Materials and methods
- 20.3 Results
- 20.4 Discussion
- 20.5 Conclusion
- References

- **Chapter 21. Roadmap for wildlife research and conservation in India**
- Abstract
- 21.1 Introduction
- 21.2 Review
- 21.3 Discussion
- References

- **Chapter 22. Flying fox: threats and global conservation status**
- Abstract
- 22.1 Introduction
- 22.2 Why do flying foxes need to be conserved?
- 22.3 Threat factors
- 22.4 Hunting
- 22.5 Cultural/symbolic threats
- 22.6 Medicinal use
- 22.7 Roost distraction/deforestation
- 22.8 Ambient temperature
- 22.9 Natural calamities
- 22.10 Pest
- 22.11 Predators
- 22.12 Global status
- 22.13 Conservation measures
- 22.14 Captive breeding
- 22.15 Roost monitoring
- 22.16 Awareness campaign
- 22.17 Conclusion
- Conflict of interest
- References

- **Chapter 23. Importance of need-based and applied research for conservation of animal fauna towards national development—an insight**
- Abstract
- 23.1 Introduction
- 23.2 Habitat preservation
- 23.3 Climate change impact
- 23.4 Importance of animal research
- 23.5 Research priorities

- **Chapter 24. Strategies for characterizing and protecting animal resources for future generations**
- Abstract
- 24.1 Introduction
- References

- **Part D: Advances in livestock research**

- **Chapter 25. Buffaloes for nutritional secure and economically empowered rural India**
- Abstract
- 25.1 Introduction

- 25.2 Buffalo is India's primary dairy livestock
- 25.3 Issues with buffalo production systems
- 25.4 Suggested remedies for sustainable buffalo production
- 25.5 Conclusion
- References

- **Chapter 26. Livestock sector: an integral component for country's food and social security**
 - Abstract
 - 26.1 Introduction
 - 26.2 Contributions of various livestock species—the Indian perspective
 - 26.3 Cattle and buffalo
 - 26.4 Sheep and goat
 - 26.5 Pigs
 - 26.6 Poultry
 - 26.7 Other livestock species
 - 26.8 Bottlenecks in livestock production
 - 26.9 Opportunities and challenges
 - References

- **Chapter 27. Proteomics-based advancements in research toward sustainable production from dairy livestock**
 - Abstract
 - 27.1 Challenges in enhancing future milk production
 - 27.2 Need for an integrated approach to enhance production
 - 27.3 Importance of information-based policy
 - 27.4 Proteomics in feed, fodder, and ruminant digestion
 - 27.5 Proteomics for low-yielding indigenous and exotic cows
 - 27.6 Proteomics for diseases in dairy animals
 - 27.7 Proteomics for diagnostics and therapeutics in cows
 - 27.8 Proteomics to tap the full potential of milk
 - 27.9 Milk safety, adulterants and milk-borne pathogens
 - 27.10 Conclusion
 - References
 - Further reading

- **Chapter 28. Artificial insemination: scope and challenges for indian dairy sector**
 - Abstract
 - 28.1 Artificial insemination
 - 28.2 Artificial insemination and frozen semen production network in India
 - 28.3 Challenges in implementation of artificial insemination in India
 - 28.4 Supply of frozen semen and liquid nitrogen to artificial insemination workers
 - 28.5 Effective artificial insemination delivery at farmers' doorstep
 - 28.6 Awareness among the farmers
 - 28.7 Conclusion
 - References

- **Chapter 29. Livestock health: current status of helminth infections and their control for sustainable development**
 - Abstract
 - 29.1 Current livestock status
 - 29.2 Impact of helminth diseases on livestock industry
 - 29.3 Pathogenicity caused by helminth parasites
 - 29.4 Diagnosis of helminth infections
 - 29.5 Strategies to control parasitic infections in animals
 - 29.6 Socioeconomic impact of control of helminth infections: prosperity and education for children
 - 29.7 Concluding remarks
 - 29.8 Outstanding questions
 - Acknowledgments
 - References

- **Chapter 30. Harnessing potential of A2 milk in India: an overview**
 - Abstract
 - 30.1 Introduction
 - 30.2 Gene polymorphism and bioactive peptides
 - 30.3 Protein variants of beta casein gene
 - 30.4 Bioactive peptides from A1/A2 types of milk
 - 30.5 Mode of action of milk derived peptides
 - 30.6 A1 milk consumption and human health
 - 30.7 Demographic distribution pattern of A1/A2 allele of beta casein gene
 - References

- **Chapter 31. Understanding heat stress response in dairy animals: an overview**
 - Abstract
 - 31.1 Introduction
 - 31.2 Physiological responses to heat stress
 - 31.3 Hematological responses to heat stress
 - 31.4 Biochemical responses to heat stress
 - 31.5 Cellular and molecular responses to heat stress
 - 31.6 Genomics: a way forward
 - 31.7 Opportunities and challenges
 - References

- **Chapter 32. Livestock sector between pushing and pulling factors- evolving scenario for national livestock development**
 - Abstract
 - 32.1 Introduction
 - 32.2 Livestock population dynamics
 - 32.3 Adoption of crossbred/improved animals
 - 32.4 Production of livestock & its products
 - 32.5 Growth of veterinary institutions
 - 32.6 Deterioration of common property resource and integration with crop culture
 - 32.7 Planning and fiscal support
 - 32.8 Prospects for livestock farming

- 32.9 Limiting factors
- 32.10 Evolving options for sustenance of livestock sector
- Acknowledgements
- References

- **Part E: Futuristic Approaches in the Field of Environment**

- **Chapter 33. Parasite diversity strategies under influence of pollutants**
- Abstract
- 33.1 Introduction
- 33.2 Diversity of parasites on fish in the challenged environment
- 33.3 Interactions of pollutants and parasites on hosts
- 33.4 Use of sensitivity of parasites to the ambient chemical environment
- 33.5 Parasite response towards pollution
- 33.6 Conclusions
- References

- **Chapter 34. Parasites : futuristic indicators of an altered aquatic environment**
- Abstract
- 34.1 Introduction
- 34.2 Bioindicators from Indian perspective
- 34.3 Fish as biomarkers in water bodies in India
- 34.4 Helminth bioindicators from international perspective
- 34.5 Conclusions and perspectives of parasites as accumulation indicators
- Acknowledgments
- References

- **Chapter 35. Effect of climate change on mosquito population and changing pattern of some diseases transmitted by them**
- Abstract
- 35.1 Introduction
- 35.2 Discussion and conclusion
- References

- **Chapter 36. New dimensions in self employment for sustainability in a changing environment**
- Abstract
- 36.1 Introduction
- 36.2 Major technologies
- 36.3 Industrial linkage
- 36.4 Apiculture and beekeeping organizations in India
- 36.5 Summary
- References
- Index.
