Contents

Contributors *vii*
Preface *ix*

1. Challenges and opportunities for plant viruses under a climate change scenario **1**
Nuria Montes and Israel Pagán

1. Introduction 2
2. Climate change and plant virus pathogenicity 8
3. Climate change and plant virus transmission 16
4. Climate change and plant virus ecology 27
5. Climate change and plant virus evolution 33
6. Climate change and management of plant virus diseases 38
7. Concluding remarks and future perspectives 44
Acknowledgments 48
References 48

2. Marine viruses and climate change: Virioplankton, the carbon cycle, and our future ocean **67**
Hannah Locke, Kay D. Bidle, Kimberlee Thamatrakoln, Christopher T. Johns, Juan A. Bonachela, Barbra D. Ferrell, and K. Eric Wommack

1. Introduction 68
2. Climate change effects on the global ocean 74
3. Key virus–host players in the marine carbon cycle 81
4. Modern approaches to investigating virus–host dynamics in a changing climate 109
5. Overall takeaways and conclusions 121
Acknowledgments 122
References 122

3. West Nile virus and climate change **147**
Rachel L. Fay, Alexander C. Keyel, and Alexander T. Ciota

1. Introduction 148
2. Temperature, viral fitness and vector competence for West Nile virus 153
3. Mosquito physiology and climate 160
4. Epidemiological models of West Nile virus and climate 164

5. The influence of temperature on West Nile virus diversity and evolution 172
6. Concluding remarks 174
References 176
Further reading 193
