

Table of Contents

- **General Aspects**

1. Introduction to aquaculture and fisheries
2. Classification and identification of aquatic animal viruses
3. Unclassified and unassigned aquatic animal viruses
4. Diagnosis of aquatic animal viral diseases
5. Prevention and control of aquatic animal viral diseases
6. Determinants of emergence of viral diseases in aquaculture

DNA Viruses of Fish

7. Poxviruses of fish
8. Iridoviruses of fish
9. Alloherpesviruses of fish
10. Adenoviruses of fish
11. Papillomaviruses and polyomaviruses of fish
12. Circoviruses of fish

RNA Viruses of Fish

13. Retroviruses of fish
14. Reoviruses of aquatic organisms
15. Birnaviruses of aquatic organisms
16. Totiviruses of fish
17. Paramyxoviruses of fish
18. Rhabdoviruses of fish
19. Orthomyxoviruses of fish
20. Coronaviruses of aquatic organisms
21. Picornaviruses of fish
22. Caliciviruses of fish
23. Togaviruses of fish
24. Hepeviruses of fish
25. Nodaviruses of fish

DNA Viruses of Crustaceans

26. Nimaviruses of crustaceans
27. Nudiviruses and other large, double-stranded circular DNA viruses of invertebrates: New insights on an old topic
28. Historic emergence, impact and current status of shrimp pathogens in Asia
29. Circoviruses of crustaceans

RNA Viruses of Crustaceans

30. Totiviruses of crustaceans
31. Togaviruses of crustaceans
32. Roniviruses of crustaceans
33. Historic emergence, impact and current status of shrimp pathogens in the Americas
34. Nodaviruses of crustaceans
35. Bunyaviruses of crustaceans

DNA Viruses of Molluscs

36. Iridoviruses of molluscs
37. Malacoherpesviruses of molluscs
38. Papillomaviruses and polyomaviruses of molluscs

RNA Viruses of Molluscs

39. Picornaviruses of molluscs

Appendix
