- List of contributors
- Foreword
- Acknowledgments

- **Chapter 1. The importance of the avian immune system and its unique features**
 - Abstracts
 - 1.1 Introduction
 - 1.2 The contribution from avian lymphocytes
 - 1.3 Contribution of the bursa of Fabricius
 - 1.4 The contribution of the chicken MHC
 - 1.5 Contributions to vaccinology
 - 1.6 Conclusion
 - References

- **Chapter 2. Structure of the avian lymphoid system**
 - Abstract
 - 2.1 Introduction
 - 2.2 The thymus
 - 2.3 The bursa of Fabricius
 - 2.4 The spleen
 - 2.5 Gut-associated lymphoid tissue
 - 2.6 Harderian gland
 - 2.7 Mural lymph node
 - 2.8 Ectopic lymphatic tissue and pineal gland
 - 2.9 Bone marrow
 - 2.10 Blood
 - References

- **Chapter 3. Development of the avian hematopoietic and immune systems**
 - Abstract
 - 3.1 Introduction
 - 3.2 Origins and migration routes of hematopoietic cells using quail/chicken complementary chimeras
 - 3.3 Aortic clusters as the intraembryonic source of definitive hematopoiesis
 - 3.4 Formation of the aorta: a dorsal angioblastic lineage and a ventral hemangioblasts lineage

- 3.5 Developing an in vitro model of hemogenic endothelium commitment and endothelial-to-hematopoietic transition
- 3.6 Spatiotemporal emergence and organization of the chicken IAHCs
- 3.7 Ecs of the late fetus/young adult bone marrow harbor hemogenic potential and generate multilineage hematopoiesis
- 3.8 Spatial transcriptomics in the chicken embryo reveals regulators of hematopoiesis
- 3.9 The avian thymus and T-cell development
- 3.10 The bursa of Fabricius, B-cell ontogeny, and immunoglobulins
- 3.11 Lymphocyte-differentiating hormones
- 3.12 Development of the immune responses
- 3.13 Conclusion
- Acknowledgments
- References

- **Chapter 4. B cells, the bursa of Fabricius, and the generation of antibody repertoires**
 - Abstract
 - 4.1 Introduction
 - 4.2 The generation of avian antibody repertoires
 - 4.3 The development of avian B cells
 - References

- **Chapter 5. Structure and evolution of avian immunoglobulins**
 - Abstract
 - 5.1 The basic structure of immunoglobulins
 - 5.2 Avian immunoglobulins
 - 5.3 Ig half-life
 - 5.4 Natural antibodies
 - 5.5 Maternal antibodies
 - 5.6 Fc receptors
 - 5.7 Avian antibody responses
 - 5.8 The chicken egg as a source of antibodies
 - References

- **Chapter 6. Avian T cells: Antigen Recognition and Lineages**
 - Abstract
 - 6.1 Introduction
 - 6.2 T cell receptor structure and lineages
 - 6.3 CD3 signaling complex
 - 6.4 CD4 and CD8
 - 6.5 Costimulatory molecules
 - 6.6 T cell lineages
 - 6.7 Methods to study T cell function
 - 6.8 Perspectives
 - References

- **Chapter 7. The avian major histocompatibility complex**
- Abstract
- 7.1 Introduction
- 7.2 The biology of the major histocompatibility complex
- 7.3 The major histocompatibility complex: a genomic region or a biological unit?
- 7.4 The chicken major histocompatibility complex and the major histocompatibility complex syntenic region
- 7.5 Classical and nonclassical major histocompatibility complex molecules
- 7.6 Chicken classical major histocompatibility complex molecules
- 7.7 Gene coevolution in the chicken major histocompatibility complex
- 7.8 Other chicken genes important for the major histocompatibility complex
- 7.9 Polymorphism and typing chicken major histocompatibility complex genes
- 7.10 Avian major histocompatibility complexes
- 7.11 Immunity, disease resistance, and the major histocompatibility complex in wild birds
- 7.12 Sexual selection and the major histocompatibility complex in wild birds
- 7.13 Origin and evolution of the immune system
- Acknowledgments
- References

- **Chapter 8. Introduction to the avian innate immune system; properties, effects, and integration with other parts of the immune system**
- Chapter 8.1. Macrophages and dendritic cells
- Abstract
- 8.1.1 Introduction
- 8.1.2 Functional properties of chicken antigen-presenting cells
- 8.1.3 Concluding remarks
- References
- Subchapter 8.2. Avian granulocytes
- Abstracts
- 8.2.1 Functional activities of heterophils
- 8.2.2 Receptors
- 8.2.3 Other innate immune receptors
- 8.2.4 Genetic effects on heterophil genotype and phenotype
- 8.2.5 Heterophil isolation
- References
- Further reading
- Chapter 8.3. Thrombocyte functions in the avian immune system
- Abstract
- 8.3.1 Introduction
- 8.3.2 Avian thrombocyte structure
- 8.3.3 Avian thrombocytes and immune responses
- 8.3.4 Infection of thrombocytes
- 8.3.5 Conclusion
- References
- Chapter 8.4. Natural killer cells
- Abstract

- 8.4.1 Potential natural killer cell receptor families
- 8.4.2 Phenotype of chicken natural killer cells
- 8.4.3 Natural killer cell function
- References
- Chapter 8.5. Soluble components and acute-phase proteins
- Abstract
- 8.5.1 Soluble components
- 8.5.2 The acute-phase response
- References
- Chapter 8.6. Pattern recognition receptors
- Abstract
- 8.6.1 Introduction
- 8.6.2 Tissue fluid and secreted pattern recognition receptors
- 8.6.3 Cell-associated pattern recognition receptors
- 8.6.4 Cytosolic pattern recognition receptor
- 8.6.5 Closing comments: general considerations in pattern recognition
- Acknowledgments
- References

- **Chapter 9. Avian cytokines and their receptors**

- Abstract
- 9.1 Introduction
- 9.2 Avian cytokine and chemokine families
- 9.3 The interleukins
- 9.4 Other interleukins
- 9.5 The interferons
- 9.6 Other factors
- 9.7 Chemokines
- 9.8 Cytokine and chemokine receptors
- 9.9 The importance of regulation of cytokine responses
- 9.10 Therapeutic potential of chicken cytokines
- 9.11 Conclusion
- References

- **Chapter 10. Immunogenetics and the mapping of immunological functions**

- Abstract
- 10.1 Introduction
- 10.2 Genetics and immunological traits in the chicken
- 10.3 Key gene loci for immunological traits
- 10.4 Detecting quantitative trait loci
- 10.5 Statistical procedures for quantitative trait loci detection
- 10.6 Strategies to use molecular data in genetic selection
- 10.7 Systems biology
- 10.8 Transgenic animals
- 10.9 Future directions for systems biology in avian immunology
- Acknowledgments
- References

- **Chapter 11. The mucosal immune system**
- Abstract
- References
- Chapter 11.1. The avian enteric immune system in health and disease
- Abstract
- 11.1.1 General considerations
- 11.1.2 Gut structure and immune compartments
- 11.1.3 Development of the enteric immune system
- 11.1.4 Viral infections of the gut
- 11.1.5 Bacterial infections of the gut
- 11.1.6 Parasitic infections of the gut
- 11.1.7 Concluding remarks
- Acknowledgments
- References
- Chapter 11.2. The avian respiratory immune system
- Abstract
- 11.2.1 Introduction
- 11.2.2 Anatomy of the respiratory tract
- 11.2.3 The paraocular lymphoid tissue
- 11.2.4 Nasal-associated lymphoid tissue
- 11.2.5 The contribution of the trachea to respiratory tract immune responses
- 11.2.6 The bronchus-associated lymphoid tissue
- 11.2.7 The immune system in the parabronchi
- 11.2.8 The phagocytic system of the respiratory tract
- 11.2.9 Handling of particles in the respiratory tract
- 11.2.10 The secretory IgA system in the respiratory tract
- 11.2.11 Gene expression analysis as a tool to investigate host–pathogen interaction
- References
- Subchapter 11.3. The avian reproductive immune system
- Abstract
- 11.3.1 Introduction
- 11.3.2 The structure and function of the avian reproductive tract
- 11.3.3 Structure and development of the reproductive tract-associated immune system in the chicken
- 11.3.4 Local and systemic changes to the immune system at the onset of sexual maturity in hens
- 11.3.5 The innate immune system and the reproductive tract
- 11.3.6 The reproductive tract immune system in infection
- References
- **Chapter 12. Impact of the gut microbiota on the immune system**
- Abstract
- 12.1 Introduction to the microbiota and avian immune system
- 12.2 Microbiota, metagenome, and microbiome
- 12.3 GI tract and immune system of poultry
- 12.4 Influence of the microbiota in immunity
- 12.5 Gut microbiota–immune system communication
- 12.6 Gut microbiota: immune homeostasis

- 12.7 Gut microbiota: immune dysfunction: dysbiosis and inflammation
- 12.8 Managing the microbiome for immune modulation
- References

- **Chapter 13. Innate defenses of the avian egg**
- Abstract
- 13.1 Introduction
- 13.2 Egg basic structures and their role in innate defense
- 13.3 Modification of egg structures during embryonic development
- 13.4 Embryonic immunity
- 13.5 Extraembryonic structures and innate immunity
- 13.6 Concluding remarks
- References

- **Chapter 14. Avian immunosuppressive diseases and immune evasion**
- Abstract
- 14.1 Introduction
- 14.2 Immunosuppression
- 14.3 Mechanisms of immunosuppression
- 14.4 Immuno-evasion
- 14.5 Conclusions
- References

- **Chapter 15. Factors modulating the avian immune system**
- Abstract
- 15.1 Endocrine regulation of immunity
- 15.2 Physiological states
- 15.3 Dietary effects on immunity
- 15.4 Assessment of immunocompetence
- References

- **Chapter 16. Autoimmune diseases of poultry**
- Abstract
- 16.1 General characteristics of autoimmune diseases
- 16.2 Autoimmune vitiligo in Smyth-line chickens
- 16.3 Spontaneous autoimmune (Hashimoto's) thyroiditis in obese-strain chickens
- 16.4 Scleroderma in UCD 200/206 chickens
- Acknowledgments
- References

- **Chapter 17. Tumors of the avian immune system**
- Abstract
- 17.1 Introduction
- 17.2 Tumors of the immune system
- 17.3 Oncogenic mechanisms of tumor viruses
- 17.4 Immune responses to oncogenic viruses
- 17.5 Antitumor responses

- 17.6 Conclusion
- References

- **Chapter 18. Practical aspects of poultry vaccination**
 - Abstract
 - 18.1 Introduction
 - 18.2 Vaccine types
 - 18.3 Vaccine application
 - 18.4 Factors influencing vaccine responses
 - 18.5 Immunosuppression
 - 18.6 Quality control of response to vaccination
 - Acknowledgments
 - References

- **Chapter 19. Comparative immunology of agricultural birds**
 - Abstract
 - 19.1 Introduction
 - 19.2 Innate immunity
 - 19.3 Cytokines
 - 19.4 Chemokines
 - 19.5 CCR7
 - 19.6 Cell surface antigens
 - 19.7 Secreted antibodies
 - 19.8 Cell lines
 - Acknowledgments
 - References

- **Chapter 20. Evolutionary and ecological immunology**
 - Abstract
 - 20.1 Introduction
 - 20.2 Assessing immune function in free-living birds
 - 20.3 Development of the immune system in free-living birds
 - 20.4 Factors causing variation in immune responses
 - 20.5 Molecular variation and evolution in immune genes
 - 20.6 Immune function as an evolving life history trait
 - 20.7 Priorities for future research
 - Acknowledgment
 - References

- **Chapter 21. Advances in genetic engineering of the avian genome**
 - Abstract
 - 21.1 Methods to manipulate the avian genome
 - 21.2 Genetically modified chickens
 - 21.3 Genetically modified quails
 - References
 - Appendix 1. Genetic stocks for immunological research
 - A.1 Introduction
 - A.2 Major histocompatibility complex lines

- A.3 General lines
- A.4 Genetically modified lines
- Acknowledgments
- Abbreviations
- Index.
