

# TABLE OF CONTENTS

## Climate, Ticks and Disease

### Section 1: Climate

#### Section 1.1: Climate and the tick ecosystem

eo1: Future climate of Africa

eo2: Vegetation-climate interactions: into the tick zone

#### Section 1.2: Modelling climate change impacts

eo3: Climate change and Lyme disease

eo4: How to Model the Impact of Climate Change on Vector-Borne Diseases?

eo5: Challenges of Modelling and Projecting Tick Distributions

eo6: Considerations for predicting climate change implications on future spatial distribution ranges of ticks

#### Section 1.3 Synopsis: Climate

### Section 2: Ticks

#### Section 2.1: Climate impacts on tick physiology

eo7: Can the impact of climate change on the tick microbiome bring a new epidemiological landscape to tick-borne diseases?

eo8: Climate influence on tick neurobiology

eo9: The impact of climate change on tick host-seeking behaviour

eo10: Expected transitions in ticks and their heritable endosymbionts under environmental changes

eo11: Drought and tick dynamics during climate change

eo12: Climate influences on reproduction and immunity in the soft tick, *Ornithodoros moubata*

eo13: Climate change and ticks: measuring impacts

#### Section 2.2: Climate impacts on tick populations

eo14: Scandinavia and ticks in a changing climate

eo15: Birds, ticks and climate change

eo16: How tick vectors are coping with global warming

eo17: Possible direct and human-mediated impact of climate change on tick populations in Turkey

eo18: Climate change alone cannot explain altered tick distribution across Europe: a spotlight on endemic and invasive tick species

eo19: Climate and management effects on tick–game animal dynamics

eo20: Climate-driven livestock management shifts and tick populations

eo21: Potential impacts of climate change on medically important tick species in North America

#### Section 2.3: Climate impacts on tick species

eo22: Climate change and tick evolution: lessons from the past

Chapter 23: *Amblyomma* ticks and future climates

Chapter 24: Climate impacts on *Dermacentor reticulatus* tick population dynamics and range  
Chapter 25: Changes expected in *Ixodes ricinus* temporal and spatial distribution in Europe  
Chapter 26: Range expansion of *Ixodes scapularis* in the USA  
Chapter 27: Distribution, seasonal occurrence, and biological characteristics of *Haemaphysalis longicornis*, a vector of bovine piroplasmiasis in Japan  
Chapter 28: Climate and vector potential of medically important North American ticks  
Chapter 29: The impact of climate change on the biology of the cattle tick, *Rhipicephalus microplus*: current knowledge and gaps to be filled  
**Section 2.4: Climate impacts on vector capacity**  
Chapter 30: Climate impacts on the vector capacity of tropical and temperate populations of the brown dog tick, *Rhipicephalus sanguineus sensu lato*  
Chapter 31: Argasidae: distribution and vectorial capacity in a changing global environment  
Chapter 32: Effects of climate change on babesiosis vectors  
Section 2.5: Synopsis: Ticks

### Section 3: Disease

#### Section 3.1: Vector–host–pathogen triangle

Chapter 33: Conflict and cooperation in tick–host–pathogen interactions contribute to increased tick fitness and survival  
Chapter 34: Climate, ticks, and pathogens: gaps and caveats  
Chapter 35: Climate and prediction of tick-borne diseases facing the complexity of the pathogen–tick–host triad at northern latitudes  
Chapter 36: Is the clock ‘ticking’ for climate change?  
Chapter 37: Climate instability and emerging tick-borne disease  
Chapter 38: Co-infections of ticks  
Chapter 39: Impact of climate change on co-feeding transmission  
Chapter 40: Human behaviour trumps entomological risk  
Chapter 41: It’s all in the timing: effect of tick phenology on pathogen transmission dynamics  
Chapter 42: *Anaplasma* species’ novel tick–host–pathogen relationships and effects of climate change  
Chapter 43: Zoonotic potential in the genera *Anaplasma* and *Ehrlichia*  
Chapter 44: Tick vectors, tick-borne diseases and climate change  
Chapter 45: Climate and other global factors at the zoonotic interface in America: influence on diseases caused by tick-borne pathogens  
Chapter 46: Microclimatic conditions and RNA viruses in ticks

#### Section 3.2: Vector-borne infections of humans

Chapter 47: Climate, ticks and tick-borne encephalitis in Central Europe  
Chapter 48: Tick-borne viral haemorrhagic fever infections  
Chapter 49: Climate impact on Lyme borreliosis and its causative agents  
Chapter 50: Climate change and tick-borne encephalitis in the Greater Alpine Region  
Chapter 51: The expansion of Japanese spotted fever and the complex group of spotted fever group rickettsia in Japan  
Chapter 52: Spatiotemporal and demographic patterns of transmission of Kyasanur Forest Disease virus in India  
Chapter 53: Argasid ticks, relapsing fever and a changing climate

Chapter 54: The potential effects of climate change on Lyme borreliosis in East-Central Europe

Chapter 55: Epidemiology of severe fever with thrombocytopenia syndrome in China

Chapter 56: Climate change and debilitating symptom complexes attributed to ticks in Australia

Chapter 57: Effect of climate change on mosquito-borne pathogens

### **Section 3.3: Vector-borne infections of domesticated animals**

Chapter 58: Ornithodoros tick vectors and African swine fever virus

Chapter 59: Tick-borne diseases of livestock in the UK

Chapter 60: Impact of climate change on tick-borne diseases of livestock in Pakistan – looking ahead

Chapter 61: The emergence of tick-borne diseases in domestic animals in Australia

### **Section 3.4: Vector-borne infections in different regions**

Chapter 62: Tick-borne infections in Central Europe

Chapter 63: Impact of climate change on ticks and tick-borne infections in Russia

Chapter 64: Is climate change affecting ticks and tick-borne diseases in Taiwan?

Chapter 65: Ticks and tick-borne pathogens in the Caribbean region in the context of climate change

Chapter 66: The strange case of tick-borne viruses in Turkey

Chapter 67: Melting, melting pot – climate change and its impact on ticks and tick-borne pathogens in the Arctic

Chapter 68: Ticks and tick-borne diseases in the Middle East

Chapter 69: The emergence of ticks and tick-borne diseases in the United States

Chapter 70: Role of climate and other factors in determining the dynamics of tick and tick-transmitted pathogen populations and distribution in western, central, and eastern Africa

Chapter 71: Tick-borne pathogens in China

Chapter 72: Tick-borne rickettsioses in Africa

Chapter 73: Climate and the emergence of tick-borne disease in Canada

Chapter 74: Climate change impacts on Ixodes ricinus in Scotland and implications for Lyme disease risk

Chapter 75: Possible impact of climate and environmental change on ticks and tick-borne disease in England

Chapter 76: Climate change, ticks and tick-borne pathogens in northern Europe

Chapter 77: Tick and tick-borne disease circulation in a changing marine ecosystem

### **Section 3.5: Synopsis: Disease**

## **Section 4: Final synopsis and future predictions.**
