- We remember
- Contributors
- Preface
- Acknowledgments
- Section I: Introduction
- Chapter 1: Clinical anatomy nomenclature
- Abstract
- Selected references
- Section II: Diagnostic Imaging
- Chapter 2: Introduction to Imaging Modalities
- part1: Current Imaging Technologies
- Case 2.1: Endoscopy
- Abstract
- Introduction
- Endoscopic procedures
- Selected references
- Case 2.2: Radiography
- Abstract
- Introduction
- Understanding the imaging technology/mode of action
- Improving radiographic image quality
- Additional radiographic imaging techniques
- Radiographic safety
- Fluoroscopy
- Selected references
- Case 2.3: Ultrasonography (US)
- Abstract
- Introduction
- Understanding the imaging technology/mode of action
- Additional US imaging techniques
- Artifacts and maximizing image acquisition
- Selected references
- Case 2.4: Computed Tomography (CT)
- Abstract
- Introduction
- Risks and limitations of CT
- Selected references
- Diagnostic Imaging 2.5: Magnetic Resonance Imaging (MRI)
- Abstract

- Introduction
- Understanding the imaging technology/mode of action
- Selected references
- Case 2.6: Nuclear Medicine (Including PET)
- Abstract
- Introduction
- Understanding the imaging technology/mode of action
- Additional nuclear medicine techniques
- Selected references
- part2: Novel Technologies
- Case 2.7: Advances in Diagnostic Imaging
- Abstract
- Files in diagnostic imaging
- 3-D printing
- Cone beam computed tomography
- Total or whole-body PET scanner
- Selected references
- Section III: Canine and Feline Clinical Cases
- Section III: 3.0 Canine Landscape Figures (1–9)
- 3.1 Feline Landscape Figures (1–9)
- Chapter 3: Axial Skeleton: Head, Neck, and Vertebral Column
- part1: Nasal Cavity, Pharynx, and Paranasal Sinuses
- Case 3.1: Nasopharyngeal Polyp
- Abstract
- Clinical case
- Clinical anatomy in canids and felids
- Selected references
- Case 3.2: Brachycephalic Airway Syndrome
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part2: Mouth
- Case 3.3: Odontogenic Disease
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part3: Eye
- Case 3.4: Retrobulbar Mass
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part4: Ear
- Case 3.5: Otitis Interna/Media
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references

- part5: Neck
- Case 3.6: Thyroid Adenocarcinoma
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 3.7: Hyperthyroidism
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part6: Vestibular System, Brain and Vertebral Column
- Case 3.8: Cervical Intervertebral Disc Disease
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 3.9: Vestibular Dysfunction
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 3.10: Glioma
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 3.11: Meningioma
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 3.12: Lumbar Intervertebral Disc Disease
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Chapter 4: Thorax
- part1: Pleura, Mediastinum, and Lungs
- Case 4.1: Aspiration Pneumonia
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 4.2: Pyothorax
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 4.3: Diaphragmatic Rupture

- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part2: Mediastinal Organs
- Case 4.4: Feline Cardiomyopathy
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 4.5: Persistent Right Fourth Aortic Arch
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 4.6: Patent Ductus Arteriosus
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 4.7: Mitral Valve Disease
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 4.8: Esophageal Foreign Body
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Chapter 5: Abdomen
- part1: Liver, Pancreas, Spleen, and Adrenal Glands
- Case 5.1: Portosystemic Vascular Anomaly
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 5.2: Extrahepatic Bile Duct Obstruction Secondary to Acute Pancreatitis
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 5.3: Hyperadrenocorticism
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 5.4: Splenic Torsion
- Abstract
- Clinical case

- Anatomical features in canids and felids
- Selected references
- part2: Stomach
- Case 5.5: Gastric Dilatation and Volvulus
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part3: Small Intestine
- Case 5.6: Small Intestine Obstruction
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part4: Large Intestine, Anal Canal, and Rectum
- Case 5.7: Megacolon
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part5: Body Wall
- Case 5.8: Abdominal Wall Hernia
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Chapter 6: Pelvic Organs
- part1: Female Urogenital System
- Case 6.1: Ectopic Ureters
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 6.2: Pyometra
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 6.3: Dystocia and the Mammary Gland
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part2: Male Urogenital System
- Case 6.4: Benign Prostatic Hyperplasia
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 6.5: Congenital Phimosis

- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Chapter 7: Thoracic Limb
- part1: Proximal Thoracic Limb (shoulder, brachium, and antebrachium)
- Case 7.1: Osteochondritis Dissecans of the Shoulder
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 7.2: Incomplete Ossification of the Humeral Condyle
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part2: Distal Thoracic Limb (carpus and manus)
- Case 7.3: Carpal Valgus Deformity
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 7.4: Phalangeal Fracture
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part3: Innervation of the Thoracic Limb
- Case 7.5: Nerve Sheath Neoplasm
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Chapter 8: Pelvic Limb
- part1: Proximal Pelvic Limb (hip, stifle, crus)
- Case 8.1: Hip Dysplasia
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 8.2: Femoral Fracture
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 8.3: Cranial Cruciate Ligament Tear
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references

- Case 8.4: Tibial Fracture
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part2: Distal Pelvic Limb (tarsus and pes)
- Case 8.5: Fracture of the Tarsal Bones
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- part3: Innervation of the Pelvic Limb
- Case 8.6: Degenerative Lumbosacral Stenosis
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Case 8.7: Calcaneal Tendon Injury
- Abstract
- Clinical case
- Anatomical features in canids and felids
- Selected references
- Chapter 9: Integument and Mammary Gland
- Case 9.1: Sebaceous Adenitis
- Abstract
- Clinical case
- Anatomical features in domestic animals
- Selected references
- Section IV: Equine Clinical cases
- 4.0 Equine Landscape Figures (1–11)
- Chapter 10: Axial Skeleton: Head, Neck, and Vertebral Column
- part1: Eye
- Case 10.1: Squamous Cell Carcinoma
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part2: Mouth
- Case 10.2: Septic Sialoadenitis
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part3: Paranasal Sinuses
- Case 10.3: Paranasal Sinus Cyst
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 10.4: Dental Disease and Sinusitis

- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part4: Pharynx
- Case 10.5: Guttural Pouch Disease
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 10.6: Dorsal displacement of the soft palate
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 10.7: Laryngeal hemiplegia
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part5: Cranial Nerves
- Case 10.8: Vestibular disease
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part6: Ear
- Case 10.9: Ear sarcoid
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part7: Poll
- Case 10.10: Nuchal Bursitis
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part8: Neck
- Case 10.11: Esophageal Obstruction
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part9: Central Nervous System
- Case 10.12: Cervical Vertebral Osteoarthritis
- Abstract
- Clinical case
- Relevant anatomical features in equids
- Selected references

- Case 10.13: Congenital Cerebellar Disorder
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Chapter 11: Thorax
- part1: Heart
- Case 11.1: Tetralogy of Fallot
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 11.2: Mitral Regurgitation
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part2: Pleura, Mediastinum, and Lungs
- Case 11.3: Pleuropneumonia
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Chapter 12: Abdomen
- part1: Stomach, Spleen, and Small Intestine
- Case 12.1: Gastric Ulcer Disease
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 12.2: Duodenitis-proximal Jejunitis
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 12.3: Epiploic Foramen Entrapment
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part2: Cecum and Colon
- Case 12.4: Cecal Impaction
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 12.5: Large Colon Volvulus
- Abstract
- Clinical case
- Anatomical features in equids

- Selected references
- Case 12.6: Small Colon Enterolith
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part3: Organs
- Case 12.7: Cholangiocarcinoma
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Chapter 13: Pelvic Organs
- part1: Female Urogenital System
- Case 13.1: Urovagina
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 13.2: Second-Degree Perineal Laceration
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 13.3: Uterine Artery Rupture
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 13.4: Granulosa Cell Tumor
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 13.5: Endometrial Cysts
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 13.6: Oviduct/Uterine Tube Obstruction
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part2: Male Urogenital System
- Case 13.7: Squamous Cell Carcinoma of the Penis
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references

- Case 13.8: Seminal Vesiculitis
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 13.9: Inguinal Hernia
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part3: Urinary Bladder and Urachal Remnant
- Case 13.10: Omphalitis and Bladder Rupture
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 13.11: Cystic Calculus
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Chapter 14: Thoracic Limb
- part1: Proximal Thoracic Limb (shoulder, brachium, and antebrachium)
- Case 14.1: Radial Neuropathy
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 14.2: Supraglenoid Tubercle Fracture
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 14.3: Ulnar Fracture
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 14.4: Radial Fracture
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part2: Distal Thoracic Limb (carpus and manus)
- Case 14.5: Superficial Digital Flexor Tendinitis
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 14.6: Osteochondral fragment of the metacarpophalangeal joint

- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 14.7: Fracture of the 2nd Phalanx
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 14.8: Foreign Body Penetration of the Hoof
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 14.9: Laminitis
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Chapter 15: Pelvic Limb
- part1: Proximal Pelvic Limb (hip, stifle, crus)
- Case 15.1: Coxofemoral Joint Luxation
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 15.2: Osteochondritis Dissecans
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 15.3: Disruption of the Fibularis (Peroneus) Tertius
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- part2: Distal Pelvic Limb (tarsus and pes)
- Case 15.4: Gastrocnemius Tendonitis
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Case 15.5: Fracture of the 4th Metatarsal Bone
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Chapter 16: Integument and Mammary Gland
- Case 16.1: Hereditary Equine Regional Dermal Asthenia
- Abstract

- Clinical case
- Anatomical features in equids
- Selected references
- Case 16.2: Mastitis
- Abstract
- Clinical case
- Anatomical features in equids
- Selected references
- Section V: Farm Animal Clinical Cases
- 5.0 Bovine Landscape Figures (1–9)
- Abstract
- Chapter 17: Axial Skeleton: Head, Neck, and Vertebral Column
- part1: Head and Neck
- Case 17.1: Maxillary Sinusitis
- Abstract
- Clinical case
- Anatomical features in bovids
- Selected references
- Case 17.2: Tooth Root Abscess
- Abstract
- Clinical case
- Anatomical features in alpacas and llamas
- Selected references
- Case 17.3: Dehorning
- Abstract
- Clinical case
- Anatomical features in bovids
- Selected references
- part2: Vertebral Column
- Case 17.4: Spinal Lymphoma
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Chapter 18: Thorax
- part1: Heart and Lungs
- Case 18.1: Pericarditis
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 18.2: Endocarditis and Atrial Lymphoma
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Chapter 19: Abdomen
- part1: Forestomachs (rumen, reticulum, omasum, and abomasum)
- Case 19.1: Traumatic Reticuloperitonitis
- Abstract

- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 19.2: Left Displacement of the Abomasum
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- part2: Small and Large Intestine
- Case 19.3: Intestinal Volvulus
- Abstract
- Clinical case
- Anatomical features in bovids
- Selected references
- part3: Cecum
- Case 19.4: Cecal Dilatation/Volvulus
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- part4: Liver
- Case 19.5: Caudal Vena Cava Syndrome
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 19.6: Hepatic Lipidosis
- Abstract
- Clinical case
- Anatomical features in ruminantss
- Selected references
- part5: Kidney
- Case 19.7: Hydronephrosis
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Chapter 20: Pelvic Organs
- part1: Female Urogenital System
- Case 20.1: Perineal Laceration
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 20.2: Dystocia With Cesarean Section
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- part2: Male Urogenital System

- Case 20.3: Urolithiasis
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 20.4: Penile Hematoma
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Chapter 21: Thoracic Limb
- part1: Thoracic Limb
- Case 21.1: Shoulder Luxation
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 21.2: Septic Arthritis of the Distal Interphalangeal Joint
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 21.3: Sole Ulcer
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 21.4: Metacarpal Fracture
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Chapter 22: Pelvic Limb
- part1: Pelvic Limb
- Case 22.1: Coxofemoral Luxation
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 22.2: Patellar Luxation
- Abstract
- Clinical case
- Anatomical features in camelids
- Selected references
- Case 22.3: Cranial Cruciate Ligament Tear
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 22.4: Gastrocnemius Rupture

- Abstract
- Clinical case
- Clinical anatomy in ruminants
- Selected references
- Chapter 23: Integument and Mammary Gland/Udder
- Case 23.1: Contagious Ecthyma
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 23.2: Chronic Udder Abscess
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Case 23.3: Teat Obstruction
- Abstract
- Clinical case
- Anatomical features in ruminants
- Selected references
- Section VI: Avian Clinical Cases
