

TABLE OF CONTENTS – EAR, NOSE, THROAT, AND TRACHEOBRONCHIAL DISEASES IN DOGS AND CATS

Abbreviations

Preface

10

1 The Ear

12

1.1 Functional considerations

12

1.1.1 The ear as sensory organ

12

1.1.2. Middle ear matches different impedances

13

1.1.3 Organ of Corti, sensory organ for hearing

14

1.1.4 Ascending and descending pathways for hearing

16

1.1.5 Vestibular organ, the key to postural reflexes and eye movement

16

1.2 History and clinical signs

17

1.2.1 History

17

1.2.2 Clinical signs

18

1.2.3 Physical examination

20

1.3 Special diagnostic techniques

20

1.3.1 Otoscopic examination

21

1.3.2 Diagnostic imaging of the ear

23

1.3.3 Tympanometry

26

1.3.4 Neurological examination for vestibular dysfunction

27

1.3.5 Hearing tests

27

1.4 Congenital diseases of the ear

30

1.4.1 Congenital deformity of the external ear

30

1.4.2 Congenital deafness

30

1.5 Inflammatory diseases of the ear

32

1.5.1 Primary and secondary skin diseases of the auricle

32

1.5.2 Perichondritis and chondritis of the auricle

34

1.5.3 Cold agglutination and cutaneous vasculitis of the auricle

35

1.5.4 Inflammatory diseases of the external ear canal

35

1.5.5 Inflammation of the tympanic membrane

41

1.5.6 Inflammatory disease of the middle ear

41

1.5.7 Labyrinthitis

45

1.6 Tumors of the ear

46

1.6.1 Malignant tumors of the auricle

46

1.6.2 Malignant tumors of the external ear canal

47

1.6.3 Tumors of the middle ear

48

1.7 Trauma to the ear

48

1.7.1 Trauma to the auricle

48

1.7.2 Auricular hematoma

49

1.7.3 Trauma to the external ear canal

49

1.7.4 Trauma to the tympanic membrane

50

1.7.5 Trauma to the temporal bone

51

1.8 Ototoxicity

52

1.9 Hearing in dogs and cats

53

1.9.1 Hearing and hearing loss in dogs

54

1.9.2 Brain stem auditory evoked responses in dogs

54

1.9.3 Hearing and hearing loss in cats

57

1.9.4 Brain stem auditory evoked responses in cats

57

References

58

2 The Nose and Nasal Sinuses

62

2.1 Functional considerations

62

2.1.1 Regulation and conditioning of the inspiratory and expiratory airflow

62

2.1.2 Mucosal cleaning

63

2.1.3 Olfaction

64

2.1.4 Specific functional systems

64

2.2 History and clinical signs

64

2.2.1 History

64

2.2.2 Clinical signs

65

2.2.3 Physical examination

66

2.3 Special diagnostic techniques

66

2.3.1 Diagnostic imaging

67

2.3.2 Rhinoscopy

68

2.3.3 Olfactory tests

70

2.4 Congenital diseases of the nose and nasal sinuses

71

2.4.1 Congenital malformation of the nasal plane

71

2.4.2 Nasal dermoid sinus cysts

73

2.4.3 Congenital cerebrospinal fluid fistula

73

2.4.4 Congenital malformation of the frontal sinuses

73

2.4.5 Congenital ciliary dysfunction

73

2.5 Rhinitis and sinusitis

74

2.5.1 Infectious rhinitis and sinusitis

74

2.5.2 Noninfectious rhinitis and sinusitis

79

2.6 Tumors of the nasal plane, the nasal

83

2.6.1 Tumors of the nasal plane

83

2.6.2 Tumors in the nasal cavity

85

2.6.3 Tumors in the frontal sinus

85

2.7 Trauma to the frontal sinus and the nose

86

2.7.1 Trauma to the frontal sinus

86

2.7.2 Trauma to the nose

87

2.8 Epistaxis

88

2.8.1 Management of acute epistaxis

88

2.8.2 Causes of epistaxis

88

2.8.3 The diagnostic plan

89

2.8.4 Management of intermittent epistaxis of unknown origin

90

References

90

3 The Pharynx

94

3.1 Functional considerations

94

3.1.1 Auditory tube serves to equalize atmospheric pressure

94

3.1.2 Swallowing

94

3.2 History and clinical signs

99

3.2.1 History

99

3.2.2 Clinical signs

99

3.3 Special diagnostic techniques

100

3.3.1 Pharyngoscopy

100

3.3.2 Diagnostic imaging of the pharynx

101

3.3.3 Electromyography of the pharyngeal muscles

102

3.4 Congenital deformities and disorders of the pharynx

102

3.4.1 Hypoplasia of the soft palate

102

3.4.2 Congenital malformation of the soft palate

103

3.4.3 Hyperplasia of the soft palate

103

3.4.4 Choanal atresia

104

3.4.5 Craniopharyngioma (Rathke's pouch tumor)

105

3.5 Pharyngitis

106

3.5.1 Nasopharyngitis

106

3.5.2 Oropharyngitis and tonsillitis

110

3.5.3 Pharyngeal mucocele

112

3.6 Tumors of the pharynx

112

3.7 Blunt and penetrating injuries of the pharynx

114

3.7.1 Blunt pharyngeal injuries

114

3.7.2 Penetrating pharyngeal injuries

115

3.8 Dysphagia

117

3.8.1 Causes of dysphagia

117

3.8.2 Diagnosis in dysphagia

124

3.8.3 Therapy in dysphagia

127

References

128

4 The Larynx

132

4.1 Functional considerations

132

4.1.1 The glottic closure reflex

132

4.1.2 Respiratory movements of the glottis

133

4.1.3 Movements of the glottis in vocalization

133

4.1.4 Action of the glottis in coughing

133

4.1.5 Supplementary innervation of the dog's intrinsic laryngeal muscles

133

4.2 History and clinical signs

135

4.2.1 History

135

4.2.2 Clinical signs

136

4.3 Special diagnostic techniques

137

4.3.1 Laryngoscopy

137

4.3.2. Diagnostic imaging of the larynx

138

4.3.3 Electromyography of the intrinsic laryngeal muscles

138

4.4 Congenital deformities and disorders of the larynx

139

4.4.1 Congenital glottis stenosis

139

4.4.2 Congenital subglottic stenosis

140

4.4.3 Laryngeal hypoplasia

141

4.5 Laryngitis

143

4.5.1 Benign laryngeal masses

148

4.5.2 Ventral midline approach to the laryngeal cavities to expose large masses

148

4.6 Tumors of the larynx

149

4.6.1 History and clinical signs of laryngeal tumors

149

4.6.2 Imaging of laryngeal tumors

150

4.6.3 Laryngoscopy for laryngeal tumors

150

4.6.4 Therapy for laryngeal tumors

151

4.7 Blunt and penetrating injuries to the larynx

152

4.7.1 Blunt laryngeal injuries

153

4.7.2 Penetrating laryngeal injuries

155

4.8 Laryngeal paralysis and functional disorders of the larynx

157

4.8.1 Neurogenic laryngeal paralysis

158

4.8.2 Laryngeal spasm

171

4.8.3 Paradoxical vocal fold movement

172

4.8.4 Sensory laryngeal paralysis and laryngeal dysfunction

172

References

173

5 The Trachea and Bronchi

178

5.1 Functional considerations

178

5.1.1 Trachea and bronchi facilitate the respiratory airflow

178

5.1.2 Trachea and bronchi condition the respiratory air

178

5.2 History and clinical signs

179

5.2.1 History

179

5.2.2 Clinical signs

180

5.2.3 Physical examination

181

5.3 Special diagnostic techniques

182

5.3.1 Diagnostic imaging

183

5.3.2 Bronchoscopy

183

5.4 Congenital diseases of the trachea and the bronchi

186

5.4.1 Hypoplasia of the trachea

186

5.4.2. Collapse of the trachea

192

5.4.3 Segmental tracheal stenosis

194

5.4.4 Congenital ciliary dysfunction

194

5.5 Tracheitis and bronchitis

195

5.5.1 Infectious tracheobronchitis in dogs

196

5.5.2 Infectious tracheobronchitis in cats

198

5.5.3 Noninfectious tracheobronchitis

198

5.5.4 Bronchiectasis

200

5.5.5 Prolapse of the dorsal ligament of trachea and main stem bronchi

200

5.5.6 Foreign bodies in the tracheobronchial tree in dogs

202

5.5.7 Foreign bodies in the tracheobronchial tree in cats

204

5.5.8 Tracheitis caused by aspiration

204

5.6 Tumors of the trachea and bronchi

205

5.7 Tracheal trauma

206

5.7.1 Trauma to the cervical trachea

207

5.7.2 Trauma to the thoracic trachea

208

5.7.3 Tracheal stenosis

209

5.8 Airway management

210

5.8.1 Endotracheal intubation

211

5.8.2 Cricothyroidotomy

213

5.8.3 Tracheostomy

213

5.8.4 Permanent tracheostoma

214

5.8.5 Tracheal T-tube

216

References

217

6 Cranial Neuralgias and Facial and Trigeminal Paralysis

220

6.1 Cranial neuralgias

220

6.1.1 Glossopharyngeal neuralgia

220

6.1.2 Trigeminal neuralgia

220

6.2 Facial and trigeminal paralysis

221

6.2.1 Facial paralysis

221

6.2.2 Trigeminal paralysis
