

TABLE OF CONTENTS

Emergency Care for Birds : A Guide for Veterinary Professionals

Acute clinical signs of disease

Clinical signs of disease

Signs of disease requiring immediate attention by a veterinary professional

Birds as emergency patients at the veterinary clinic

Observation, physical examination and diagnostic tests

General stabilization of sick birds

Heat

Fluid therapy

Nutritional support

Oxygen

Analgesia and anesthesia

Quick guide for stabilizing birds in case of severe dyspnea, debilitation and shock

Specific emergency situations

Leg band constriction

Bleeding pin feather

Hyperthermia

Bleeding nail or beak tip

Perforating (bite) trauma of the beak

Lacerations and cuts

Bite wound or deep wound caused by claws

Self-mutilation

Burn injuries

Contact with glue from rodent or insect trap

Oil contamination

Intoxications

Concussion

Cloacal prolapse

Vomiting

Crop stasis

Seizures

Egg binding/dystocia

Dyspnea

Falling, abnormal stances and abnormal movements

Paralysis

Abnormal position of limbs: Fractures and luxations

Maxillary hyperextension/palatine bone luxation

Abnormal droppings

Damaged air sac.
