

TABLE OF CONTENTS

Equine Exercise Physiology: The Science of Exercise in the Athletic Horse

Section 1: Integrative physiology and exercise testing

1. Integrative physiology of exercise
2. Laboratory assessment of fitness NEW!
3. Exercise testing in the field

Section 2: Musculoskeletal system

4. Muscle physiology: responses to exercise
5. Skeletal physiology: responses to exercise
6. Tendon physiology: responses to exercise and training
7. Joint physiology: responses to exercise and training
8. Biomechanics of locomotion in the athletic horse

Section 3: Respiratory System

9. Upper airway function of normal horses during exercise
10. Lower airway function of normal horses: responses to training and exercise

Section 4: Cardiovascular System

11. Heart and vessels: functions during exercise and response to training

Section 5: Metabolism and Nutrition

12. Metabolic responses to exercise and training
13. Endocrine responses to exercise and training
14. Nutrition

Section 6: Fluids and electrolytes

15. Physiology of body fluids in the equine athlete

16. Acid-base physiology during exercise and in response to training

17. Thermoregulation NEW!

Section 7: Hematology and Immunology

18. Hematologic responses to exercise and training

19. Immunological responses to exercise and training

Section 8: Gastrointestinal

20. Effects of exercise and training on hepatic and gastrointestinal function.
