Preface	xi
Introduction	xiii
Chapter 1. Habitats: Occupation, Protection and Exploitation	1
1.1. Diverse and unusual habitats	1
1.1.1. Psammophilous* habitats	1
1.1.2. Reef cavity habitats	2
1.1.3. Rocky habitats.	4
1.1.4. Plant habitats	5
1.1.5. Zoohabitats	6
1.1.6. Intertidal* habitats	6
1.1.7. Karst* habitats	7
1.1.8. Intermittent habitats.	8
1.1.9. Habitats modified by other animals	8
1.1.10. Manmade habitats	8
1.1.11. Ecological niches not frequented by other species	9
1.1.12. Seemingly unlimited pelagic habitats	10
1.1.13. Temporal fluctuations in habitat occupancy.	10
1.1.14. Ontogenic and/or physiological fluctuations	10
1.1.15. An amphibious existence	11
1.1.16. An underground life.	16
1.1.17. Living in the abyss	19
1.2. Food: the use of trophic habitats	22
1.2.1. Choose more or less energy-giving foods.	23
1.2.2. Adopt original hunting methods	29
1.2.3. Use of cannibalism	44
1.2.4. Practice grazing	

1.3. Individual and collective protective habitats	56
1.3.1. Protecting oneself from environmental factors	56
1.3.2. Protecting oneself from congeners and competing species	59
1.3.3. Protecting oneself from predators	61
1.3.4. Practicing the art of camouflage	67
1.3.5. A safe resting phase.	72
1.3.6. Owning and defending a territory	73
1.4. Breeding habitats (Volume 2, section 2.1).	77

Chapter 2. Strategies and Tactics for the Occupation of Available Territories.

Chapter 2. Strategies and Tactics for the Occupation of Available Territories.	79
2.1. Faithfulness to habitat and birth site	79
2.1.1. Remaining faithful to one's habitat	79
2.1.2. Loyalty to one's birth site	85
2.2. Habitat changes	87
2.2.1. The great migrators	88
2.2.2. Navigators	107
2.2.3. Great travelers.	112
2.2.4. Divers	114
2.2.5. Illegal migrants	119
2.2.6. Adapting to ambient hydrodynamics	121
2.2.7. Overcoming an obstacle	128
2.3. The colonization of new territories.	136
2.3.1. Invaders	137
2.3.2. Western colonizers	137
2.3.3. Eastern colonizers.	138
2.3.4. Invasions of tropical species	139
2.3.5. Parasitic invasions	139
2.3.6. A most unfortunate introduction.	140
2.3.7. Marine "aliens"	141
2.3.8. Recent tropical peril	142
2.3.9. Marine reserves and fish farms: habitats that facilitate migration?	143
2.3.10. Other colonization related to aquaculture	144
2.3.11. Unexplained presence.	144

Chapter 3. Communication and Social Life: Behaviors Related to Social Interrelations between Congeners, Parasites and Predators

Chapter 3. Communication and Social Life: Behaviors Related to Social Interrelations between Congeners, Parasites and Predators	147
3.1. Communication between partners	147
3.1.1. Accurate information signals	147

3.1.2. Fast and efficient visual signals	148
3.1.3. Useful and precise olfactory signals.	149
3.1.4. Substitution phenomena between sensory signals	151
3.1.5. Highly informative auditory signals.	151
3.1.6. Remarkably discriminating electrical signals.	156
3.1.7. Champions of neuroethology	158
3.2. Neighborly warning	159
3.2.1. Beneficial altruism between congeners	159
3.2.2. Acoustic solidarity for defensive purposes	159
3.2.3. A chemical alert for olfactory purposes.	159
3.2.4. A survival benefit linked to competition between predators	161
3.2.5. Anxiety disorders triggered by alarm substances.	161
3.3. Groups, shoals, swarms and masses	162
3.3.1. A simple convergence of interests.	162
3.3.2. Artificial groupings of anthropogenic origin	162
3.3.3. Unity is strength.	163
3.3.4. Choice of association.	163
3.3.5. Coordinated swimming under light conditions.	164
3.3.6. A defense: reducing vulnerability to predation.	166
3.3.7. Learning to be careful in social relationships.	168
3.3.8. Less need for security.	169
3.3.9. Different motivations.	169
3.3.10. Protection against parasites.	169
3.3.11. Unique protection for females: reducing sexual harassment	170
3.3.12. Forming unisex communities.	170
3.3.13. An energy goal: reducing the costs of movement.	172
3.3.14. The advantage of a collective memory	173
3.3.15. Another objective: increasing opportunities for food.	173
3.3.16. Who is the leader?	174
3.3.17. A colonization strategy	175
3.3.18. The role of collective education	176
3.3.19. A social life under cerebral neuroendocrine control	176
3.4. Mutualists and parasites.	176
3.4.1. A model of association	177
3.4.2. Ectoparasites	178
3.4.3. Endoparasites	178
3.4.4. Accommodation of eggs by hosts	178
3.4.5. Zoophile fish	179
3.5. Cleaners	180
3.5.1. Removing parasites for “good customers”	180
3.5.2. Unsustainable early skills	182

3.5.3. Flexibility under neurohormonal control	183
3.5.4. A sometimes dishonest job.	183
3.5.5. A clownfish that acts as a cleaner... or a cleaner-turned clownfish?	184
3.6. Helpers	184
3.6.1. Social cooperation in parental care	184
3.6.2. Helpers able to escape their servitude.	185
3.6.3. Behavioral gender differences	186
3.7. Selection of sexual partners.	186
3.7.1. A major concern for any progenitor: choosing a partner	187
3.7.2. Social learning	187
3.7.3. Most importantly, avoid choosing the wrong partner	188
3.7.4. How can the best partners be identified?	188
3.7.5. Initial choices	204
3.7.6. Varying preferences	205
3.7.7. Copying others	205
3.7.8. The desire for novelty	206
3.7.9. Females who refuse.	207
3.7.10. Reconstituted couples	208
3.7.11. No choice.	209
3.8. Sexual conflicts	210
3.8.1. Conflicting interactions between sexes	210
3.8.2. Intrasexual conflicts	211
3.8.3. Incompatibility between ecotypes	211
3.8.4. Who will win this conflict?	212
3.8.5. A conflict that ends in divorce.	212
3.9. Joint provision of parental care.	213
3.10. Competitors.	213
3.10.1. Be a good observer	213
3.10.2. A competition for space.	213
3.10.3. Competition for food	215
3.10.4. Sexual competition	215
3.10.5. Competition for nest building	217
3.10.6. Sperm competition	217
3.10.7. Females intervening to their advantage in sperm competition	219
3.10.8. Cases of social deprivation	220
3.10.9. Love or war or love and war	220
3.10.10. Females in competition using physical arguments	222
3.10.11. Chemical weapons	223

3.10.12. Dominance expressed through fecal olfactory signals	223
3.10.13. A peaceful solution for escaping competition	223
3.10.14. Cases of non-aggression.	224
3.11. Sense of family and recognition of familiar congeners	225
3.11.1. The value of recognizing “blood ties”	225
3.11.2. Interfamilial crossbreeding in spite of genetic barriers.	226
3.11.3. Known congeners	226
Glossary	229
Species Index	253
Summary of Volume 2	259
