

TABLE OF CONTENTS – Invertebrate Embryology and Reproduction

- 1. Historical Review

2. Introduction

A-Gametogenesis and Gametes

Origin of germ cells

Formation of Gametes

B-Fertilization

C- Development, Early Development

3. Kingdom Protista

Phylum Protozoa

Class 1- Mastigophora

Order Volvocida

Chlamydomonas

Volvox

Wonderful Features of Volvox

Class 2- Sarcodina

Subclass Rhizopoda

Diffugia

Subclass Actinopoda

Order Heliozoa

Actinophrys

Class 3- Sporozoa ???

Subclass Telosporidea

Monocystis

Class 4-Ciliophora

Order Hymenostomatida

Paramecium, Conjugation

Additional References

• Table of Classification of Animal Kingdom

4. Porifera (parazoa)

5. Cnidaria

6. Ctenophores

7. Platyheminthes

8. Nemertea

9. Nematoda

Definition

Historical Review

Characteristic Features

Classification

Reproduction

Agametic and parthenogenesis

Gametic reproduction

Development

10. Annelida

11. Archiannelides

12. Oligocheata

13. Hirudinea

14. Arthropods

Crustacea

Definition

Historical Review

General characters

A- Branchiopoda

i- Anostraca

Artemia

ii- Diplostraca

Daphnia

B- Cirripedia

Lepas sp.

C- Malacostraca

i- Hoplocarida

Squilla

ii- Eucarida

Decapoda

Penaeodea

Reptantia

Astasidae

Brachyura

15. Mollusca

Gastropoda

Cephalopoda (Siphonopoda)

General Characters

Classification

Reproduction

Agametic Reproduction

Gametic Reproduction

Spermatophores

Dehiscence of spermatophore

Formation of spermatophore

Hardening of spermatophore

Reproductive Behavior, Mating, Copulation, and Spawning

Development

16. Echinoderm

17. Tunicata

Subphylum Urochordata

General Characteristics

Order Pleurogonea

Class Ascidiacea

Reproduction

Characteristics

Spawning

Classification

Fertilization

Order 1- Enterogona

Embryogenesis

Order 2- Pleurogona

Structure of fully formed larva

Reproduction

Experimental Studies

Agametic reproduction

Additional References

Gametic reproduction

Gametogenesis

Spermatogenesis

The sperm

Oogenesis

The full grown oocyte

Spawning

Fertilization

Early Development (Embryogenesis)

I-Maturation and Ooplasmic segregation

- a- The completion of meiosis of the egg;
- b- The development of the sperm pronucleus;
- c- Ooplasmic segregation;
- d- Syngamy, or pronuclear fusion.

II- Cleavage: (second phase of embryogenesis)

III- Gastrulation and Neurulation

Gastrulation

Neurulation

IV- Morphogenesis and Cell Differentiation

Hatching

Structure of fully formed larva

Metamorphosis

Endostyle

Atrium

Alimentary canal

Nervous system

Time required for development

Experimental Studies

Additional References.
