

TABLE OF CONTENTS

1. Monitoring, complications and mortality in anaesthesia (I. Sáñez, I. Redondo)

2. Prior assessment of patients' state of health (M.A. Cabezas)

Preanaesthetic assessment and preanaesthetic consultation

Additional tests

ASA classification and preanaesthetic assessment of critical points

3. Anaesthetic records (F. Aprea)

4. Basic monitoring (I. Sáñez)

Proper interpretation of pulmonary and cardiac auscultation

Peripheral pulse palpation

Mucous membrane colour

Capillary refill time

5. Cardiovascular system (I. Sáñez, D. Torralbo, M. Soto)

Electrocardiogram (ECG): arrhythmia detection and assessment of ECG changes

Arterial pressure

Noninvasive methods: conventional oscillometry, high-definition oscillometry and Doppler method

Invasive methods: arterial catheterisation techniques, interpretation of the invasive arterial pressure curve and possible artefacts

Central venous pressure (CVP)

Cardiac output

Measurement methods

Importance of in-clinic measurement

Preload monitoring

Tissue oxygen delivery

6. Respiratory system (F. Martínez, M. Martínez)

Pulse oximetry

SO₂ percentage

Plethysmographic curve

Capnography

Curve interpretation

Importance of capnography in the V/Q ratio

7. Respiratory mechanics monitoring (J. Martínez, I. Sáñez)

Spirometry in patients with spontaneous ventilation

Spirometry in patients with mechanical ventilation

Pressure-time, flow-time and volume-time curves

Pressure-volume and flow-volume loops

Haemodynamic implications of mechanical ventilation

8. Temperature (I. Redondo)

Hypothermia: consequences and prevention

Hyperthermia: consequences and prevention

9. Central nervous system monitoring (I. Sáñez)

Introduction

Assessment of the degree of hypnosis

Position of the eyeball and reflexes

Anaesthetic agent concentration

Assessment of electrical brain activity: electroencephalogram (EEG)

Assessment of the degree of intraoperative analgesia

Arterial pressure (AP) and heart rate (HR)

Plethysmographic curve

Parasympathetic tone activity (PTA)

Changes in the BIS

Additional monitoring of the nervous system: intracranial pressure (ICP) monitoring

10. Neuromuscular block monitoring (M. Martín, M. Lorenzutti)

11. Arterial and venous blood gasometry (E. Rioja, I. Sáñez)

Acidosis-alkalosis

PaO_2 , PaCO_2 , HCO_3

Pa:FiO₂ ratio

A-a CO₂ Diff assessment

Electrolyte imbalances affecting anaesthesia

12. Lactate (C. Palacios, I. Sáñez)

Measurement and interpretation

Importance as a diagnostic and prognostic marker

Clearance

13. Postanaesthetic monitoring of critical patients (J. Viscasillas)

14. Glossary of terms.
