

# TABLE OF CONTENTS – Reproductive Genomics in Domestic Animals

Contributors

Preface

## Part I Quantitative Genomics of Reproduction 3

### 1 Reproductive Genomics: Genome, Transcriptome, and Proteome Resources 5

*Noelle E. Cockett*

1.1 Introduction 5

1.2 Discovery of underlying genetic influences 5

1.3 Characterization of gene expression 14

1.4 Resources for protein analysis 16

1.5 Future research directions 17

References 17

### 2 Quantitative Genomics of Female Reproduction 23

*Jeffrey L. Vallet, Dan J. Nonneman, and Larry A. Kuehn*

2.1 Introduction 23

2.2 Female reproductive phenotypes 23

2.3 Genetic markers and genotyping methods 26

2.4 Association of phenotypes with genotypes 28

2.5 Some illustrative examples of reproductive QTL 37

2.6 Future research directions 41

References 43

### 3 Quantitative Genomics of Male Reproduction 53

*Eduardo Casas, J. Joe Ford, and Gary A. Rohrer*

3.1 Introduction	53
3.2 Male reproduction phenotypes	53
3.3 Genetics, genomics, and quantitative trait loci (QTL)	55
3.4 QTL identified for male reproduction traits	56
3.5 Future research directions	60
References	61

#### **4 Genetics and Genomics of Reproductive Disorders 67**

*Peter Dovc, Tanja Kunej, and Galen A. Williams*

4.1 Introduction	67
4.2 Reproductive disorders associated with the ovary	68
4.3 Reproductive disorders associated with the vagina and uterus	73
4.4 Reproductive disorders associated with pregnancy and placenta	76
4.5 Reproductive disorders associated with male reproductive organs	78
4.6 Reproductive disorders associated with embryos and fetuses	85
4.7 Future research directions	89
References	90

#### **5 Genomics of Reproductive Diseases in Cattle and Swine 99**

*Holly Neibergs and Ricardo Zanella*

5.1 Introduction	99
5.2 Bovine paratuberculosis	100
5.3 BRD	102
5.4 Brucellosis in cattle	106
5.5 Leptospirosis in swine	108
5.6 Aujeszky's disease (pseudorabies)	110
5.7 PRRS	111
5.8 Future research directions	113

References 113

## **6 Comparative Genomics of the Y Chromosome and Male Fertility 129**

*Wansheng Liu*

6.1 Introduction 129

6.2 Characteristics of the mammalian Y chromosome 129

6.3 Sequence and gene content of the Y chromosome 131

6.4 Function of Y chromosome genes in spermatogenesis and male fertility 136

6.5 Polymorphisms of the Y chromosome and male fertility 142

6.6 Future research directions 145

References 146

## **7 Mitochondriomics of Reproduction and Fertility 157**

*Zhihua Jiang, Galen A. Williams, Jie Chen, and Jennifer J. Michal*

7.1 Introduction 157

7.2 Cytoplasm mitochondrial genomes in fertility and reproduction 158

7.3 Nuclear mitochondrial genomes in fertility and reproduction 162

7.4 Future research directions 174

References 174

## **Part II Physiological Genomics of Reproduction 181**

### **8 Functional Genomics Studies of Ovarian Function in Livestock: Physiological Insight Gained and Perspective for the Future 183**

*Beau Schilling and George W. Smith*

8.1 Introduction 183

8.2 Transcriptomics of ovarian tissues: EST sequencing 184

8.3 Transcriptomics of ovarian tissues: Microarray studies 189

8.4 Proteomics of ovarian tissues 196

8.5 Future research directions 197

References 199

## **9 Physiological Genomics of Preimplantation Embryo Development in Production Animals 205**

*Luc J. Peelman*

9.1 Introduction 205

9.2 Preimplantation developmental stages and transcriptomics 206

9.3 Preimplantation developmental systems and transcriptomics 214

9.4 Future research directions 219

References 220

## **10 Physiological Genomics of Conceptus–Endometrial Interactions Mediating Corpus Luteum Rescue 231**

*Troy L. Ott and Thomas E. Spencer*

10.1 Introduction 231

10.2 Physiological genomics of luteal regression 232

10.3 Physiological genomics of blocking luteal regression 235

10.4 Future research directions 242

References 243

## **11 Physiological Genomics of Placental Growth and Development 251**

*Sukanta Mondal*

11.1 Introduction 251

11.2 Placental development: Basics 252

11.3 Placental hormones and peptides 253

11.4 Transcriptomics of placental development 261

11.5 Future research directions 263

References 263

## **12 Cellular, Molecular, and Genomic Mechanisms Regulating Testis Function in Livestock 269**

*Kyle Caires, Jon Oatley, and Derek McLean*

12.1 Introduction 269

12.2 Spermatogenesis	270
12.3 Transcriptomics of testis in bulls	272
12.4 Reproductive genomics in boars	279
12.5 Future research directions	283
References	284

## **Part III Genomics and Reproductive Biotechnology 291**

### **13 The Epigenome and Its Relevance to Somatic Cell Nuclear Transfer and Nuclear Reprogramming 293**

*Jorge A. Piedrahita, Steve Bischoff, and Shengdar Tsai*

13.1 Introduction	293
13.2 The epigenome	293
13.3 Epigenetic reprogramming	297
13.4 Genomic imprinting	301
13.5 SCNT and epigenetic abnormalities	307
13.6 Future research directions	310
References	310

### **14 Biotechnology and Fertility Regulation 317**

*Valéria Conforti*

14.1 Introduction	317
14.2 Basic aspects in vaccine development	318
14.3 Specific aspects in vaccine development	320
14.4 Sperm antigens	323
14.5 Zona pellucida antigens	326
14.6 LHRH antigens	328
14.7 Future research directions	332
References	333

## **15 Proteomics of Male Seminal Plasma 339**

*Vera Jonakova, Jiri Jonak, and Marie Ticha*

15.1 Introduction 339

15.2 Proteins of seminal plasma 340

15.3 Function of seminal plasma proteins 343

15.4 *In vitro* effects of seminal plasma proteins 347

15.5 Properties of major proteins of seminal plasma of domestic animals 348

15.6 Future research directions 352

References 352

## **16 Evolutionary Genomics of Sex Determination in Domestic Animals 367**

*Eric Pailhoux and Corinne Cotinot*

16.1 Introduction 367

16.2 State of knowledge of sex differentiation 369

16.3 Sex differentiation in domestic mammals 374

16.4 Sex determination in nonmammal domestic species 380

16.5 Future research directions 382

References 383

## **17 Toxicogenomics of Reproductive Endocrine Disruption 397**

*Ulf Magnusson and Lennart Dencker*

17.1 Introduction 397

17.2 Reproductive endocrine disruption 398

17.3 Reproductive endocrine disruptors 401

17.4 Toxicogenomics 404

17.5 Future research directions 408

References 408

## **18 Nutrigenomics for Improved Reproduction 413**

*John P. McNamara*

18.1 Introduction 413

18.2 Nutritional physiology of reproduction: A brief view 414

18.3 Mechanistic connections between nutrient flux and reproductive processes 417

18.4 History of integration of physiological state, nutrient flux, and reproduction 421

18.5 Nutritional physiology of pregnancy and lactation 422

18.6 Nutrigenetics and nutrigenomics approaches for improved fertility, pregnancy, and lactation 427

18.7 Future research directions 434

References 435

Index 439.
