

## **TABLE OF CONTENTS – Reproductive Technologies and Biobanking for the Conservation of Amphibians**

Integrating Reproductive Technologies into the Conservation Toolbox for the Recovery of Amphibian Species.

Status of Global Amphibian Declines and the Prioritisation of Species for Captive Breeding.

Methods of Identifying the Sex of Amphibians and of Conditioning Captive Brood Stock for Assisted Reproduction.

Hormonal Control of Amphibian Reproduction.

Non-invasive Monitoring of Stress Physiology during Management and Breeding of Amphibians in Captivity.

Ultrasound Imaging to Assess Female Reproductive Status and Inform Hormonally Induced Ovulation.

Protocols for Hormone-Induced Spermiation, and the Cold Storage, Activation, and Assessment of Amphibian Sperm.

Genetic Management of Threatened Amphibians; using Artificial Fertilisation Technologies to Facilitate Genetic Rescue and Assisted Gene Flow.

Cryopreservation of Amphibian Genomes: Targeting the Holy Grail, Cryopreservation of Maternal-Haploid and Embryonic-Diploid Genomes.

Culturing and Biobanking of Amphibian Cell Lines for Conservation Applications.

Linking in-situ and ex-situ Populations of Threatened Amphibian Species using Genome Resource Banks.

Genome Resource Banks as a Tool for Amphibian Conservation.
