

# **TABLE OF CONTENTS - Small Animal Emergency and Critical Care for Veterinary Technicians, 4th Edition**

- Cover image
- Title page
- Table of Contents
- Copyright
- Dedication
- Contributors
- Preface
- Acknowledgments
  
- **Section I: Critically Ill Small Animals**
- Introduction
  
- **1: Critical Thinking—Skill of Observation and Interpretation**
- Defining Critical Thinking
- Discovering How Critical Thinking Impacts Decision-Making
- Developing Critical Thinking Skills
- Delivering Information Received
- Sustaining the Development and Use of Critical Thinking
- Scenario
  
- **2: Monitoring of the Critically Ill or Injured Patient**
- Physical Examination
- Clinical Pathologic Monitoring
- Packed Cell Volume and Total Plasma Solids Measurements
- General Guidelines for Interpretation of Packed Cell Volume and Total Plasma Solids Measurements
- Hematologic Analysis
- Electrolyte and Chemistry Analyzers
- Urine Volume and Specific Gravity
- Blood Gas Analysis
- Colloid Osmotic Pressure
- Lactate Concentration
- Coagulation Tests
- Device-Based Monitoring
- Pulse Oximetry
- Blood Pressure
- Electrocardiogram Monitoring
- End-Tidal Carbon Dioxide Monitoring
- Central Venous Pressure
- Multiparameter Monitoring Equipment
- Manufacturers of Equipment Listed in the Text

- Scenario
- Medical Math Exercises
  
- **3: Patient's Lifeline: Intravenous Catheter**
- Types of Intravenous Catheters
- The Anatomy of the Multilumen Catheter Kit
- Choosing the Right Catheter
- Vascular Access Points
- Placement
- Prevention and Management of Complications During Placement
- Stabilization
- Intraosseous Catheterization
- Challenges
- Maintenance
- Scenario
  
- **4: Fluid Therapy**
- Body Water
- Patient Assessment
- In-Hospital Monitoring of Fluid Therapy Patients
- Fluid Types
- Delivery Systems
- Complications of Fluid Therapy
- Scenario
- Medical Math Exercise
  
- **5: Transfusion Medicine**
- Whole Blood and Components
- Blood Sources
- Blood Collection
- Blood Administration
- Transfusion Reactions
- Alternate Transfusion Products and Methods
- Scenario
- Medical Math Exercise
  
- **6: Nutritional Support for the Critically Ill Patient**
- Nutritional Assessment
- Goals of Nutritional Support
- Summary
- Products Listed
- Scenarios
- Medical Math Exercise
  
- **7: Oxygen Therapy Techniques**
- Definitions/Acronyms
- How to Assess the Need for Oxygen
- How to Assess Oxygen Levels
- How to Deliver Oxygen
- Oxygen Toxicity

- Conclusion
- Scenario
- Medical Math Exercise
  
- **8: Mechanical Ventilation**
- Important Terms
- Indications for Mechanical Ventilation
- Mechanical Ventilation Strategies According to Disease Type
- Placing the Patient on the Ventilator
- Nursing Considerations for Long-Term Ventilator Patients
- Troubleshooting
- Weaning from the Ventilator
- Summary
- Scenario
- Medical Math Exercise
  
- **9: Pain Assessment and Treatment**
- Physiology of Pain
- Assessment and Recognition
- Pain Relief
- Pure (Full) Agonists
- Mixed Agonist and Antagonist Opioids
- Antagonists
- Topical Analgesia
- Local Infiltration
- Alpha2 Agonists
- Alpha2 Antagonist Reversal
- Constant Rate Infusion (CRI)
- Epidural Anesthesia and Analgesia
- Monitoring Drug Effects
- Pain Management Checklist
- Scenario
- Medical Math Exercise
  
- **10: Supporting the Critically Ill or Injured Through Physical Rehabilitation Techniques**
- Introduction to Physical Rehabilitation Team
- Physical Therapy and Physical Rehabilitation
- Patient Selection
- Treatment Techniques
- Early Intervention and Mobilization for ICU Patients
- Therapeutic Modalities and Tools
- General Nursing Care in the ICU Patient
- Cardiac Patients
- Summary
- Scenario
  
- **11: Anesthesia in the Critically Ill or Injured Patient**
- Goals for Success
- Preanesthetic Evaluation

- Preanesthetic Stabilization
- Preanesthetic Preparedness
- Drugs
- Analgesics, Local Anesthetics, and Preanesthetic Agents
- Intubation
- Maintaining a Patient Under General Anesthesia
- Controlled Ventilation
- Monitoring
- Supportive Measures Needed During Anesthesia
- Anesthetic Emergencies and Complications
- Recovering the Patient
- Scenario
- Medical Math Exercise
  
- **12: Isolation Techniques in Clinical Practice**
- Infection Risks in Veterinary Clinics
- Infection Control Programs
- Isolation Protocols
- Isolation Facilities
- Scenario
- Section II: Emergency Care for Small Animals
- Introduction
  
- **13: Emergency Receiving**
- Preparation—The Readiness Assessment
- Facility
- Assessment of the Emergent Patient
- Greeting the Client
- Readiness
- Approach
- Communication
- Re-Energizing
- Scenario
  
- **14: Management of Patients in Shock**
- Types of Shock
- Oxygen Delivery
- Pathophysiology of Shock
- Initial Assessment and Recognition
- Therapy
- Monitoring
- Summary
- Scenario
- Medical Math Exercise
  
- **15: Cardiopulmonary Resuscitation**
- Preparation
- Recognition
- Basic Life Support
- Advanced Life Support

- Post–Cardiac Arrest Care
- Summary
- Scenario
- Medical Math Exercise
  
- **16: Traumatic Emergencies**
- Readiness
- Patient Assessment
- Trauma Triad of Death
- Resuscitation
- Analgesia
- Wounds, Bandages, and Splints
- Tubes and Drains
- Surgical Resuscitation
- Basic Monitoring
- Advanced Monitoring
- Patient Care—Other Considerations
- Nutrition
- Communication
- Assessment and Management of Specific Injuries
- Conclusion
- Scenario
- Medical Math Exercise
  
- **17: Hematologic Emergencies**
- Hemostasis
- Clinical Assessment
- Anemia
- Scenario
- Medical Math Exercise
  
- **18: Cardiovascular Emergencies\*\***
- The authors and publisher wish to acknowledge Craig C. Cornell for previous contributions to this chapter.
- Diagnosis of Heart Disease
- Overview of Cardiac Physiology and Pathophysiology
- Heart Failure
- Identifying Patients Who May Have Heart Failure
- Monitoring Therapy for Heart Failure
- Cardiac Arrhythmias
- Heartworm Disease
- Cardiac Tamponade and Pericardial Effusion
- Feline Aortic Thromboembolism
- Scenario
- Medical Math Exercise
- Lidocaine
  
- **19: Respiratory Emergencies**
- Patient Presentation
- Be Prepared

- Obtaining Vascular Access
- Rapid Sequence Intubation
- Primary Survey and Minimum Database
- Secondary Survey
- Continued Management
- Common Respiratory Emergencies
- Traumatic Conditions
- Airway Disorders
- Pulmonary Edema
- Pneumonia
- Scenario
- Medical Math Exercise
  
- **20: Gastrointestinal Emergencies**
- Vomiting
- Diarrhea
- First Aid Measures
- Physical Examination
- Resuscitation of the Critical Patient
- Diagnosis
- Medical Treatment
- Monitoring
- Record Keeping
- Anesthesia and Surgery
- Postoperative Care
- Specific Gastrointestinal Emergencies
- Conclusion
- Scenario
- Medical Math Exercise
  
- **21: Metabolic and Endocrine Emergencies**
- Diabetic Ketoacidosis
- Hypoadrenocorticism (Acute Addisonian Crisis)
- Case Study
- Hypercalcemia
- Hypocalcemia
- Hypoglycemia
- Scenario
- Medical Math Exercise
  
- **22: Urologic Emergencies**
- Urinary Obstruction
- Kidney Disease
- Treatment of Acute Kidney Injury
- Treatment of Chronic Kidney Failure
- Conclusion
- Scenario
- Medical Math Exercise

- **23: Reproductive Emergencies**
- Four Phases of Ovarian Cycle
- Reproductive Emergencies in Females
- Reproductive Emergencies in Males
- Scenario
- Medical Math Exercise
  
- **24: Ocular Emergencies**
- Basic Ophthalmic Exam Review
- Equipment Suggestions
- Basic Ophthalmic Surgical Pack
- What Should You Have in Your Pharmacy?
- Globe
- Adnexa
- Cornea
- Uvea
- Acute Glaucoma
- Lens
- Retina
- Brain Disease
- Orbit
- Exotics
- Conclusion
  
- **25: Neurologic Emergencies**
- Seizures
- Vestibular Disorders
- Spinal Cord Injury
- Peripheral Nervous System Emergencies
- Head Trauma
- Rabies
- Conclusion
- Scenario
- Medical Math Exercise
  
- **26: Toxicologic Emergencies: Dogs and Cats**
- History and First Aid
- In-Hospital Assessment and Treatment
- Common Dog and Cat Toxic Substances
  
- **27: Avian and Exotic Emergencies**
- Hospital Preparedness
- Preparing for Cardiopulmonary Resuscitation for the Avian, Reptilian, and Small Animal Exotic Patient
- Avian Emergencies
- Exotic Small Mammal Emergencies
- Common Emergencies in Rabbits
- Common Emergencies in Rodents
- Reptile Emergencies
- Scenario

- Medical Math Exercise
- **28: Disaster Medicine**
  - Legal Issues
  - Types of Disasters
  - Triaging
  - Owner in the Disaster
  - Self-Protection
  - Common Pet Emergencies
  - Search and Rescue Canines
  - Boarding Owned Pets
  - Decontamination
  - Surgery
  - Record Keeping
  - Rechecking Appointments
  - Helping the Local Veterinary Infrastructure
  - Personal Recovery after the Disaster
  - Structure of a Disaster
  - Becoming Involved
  - Joining a Team
  - Disaster Training
  - Conclusion
  - Scenario
  - Section III: Practice Management
  - Introduction
- **29: Fostering Wellbeing in the ER and ICU**
  - Definition of Wellbeing
  - Importance of Wellbeing
  - Issues That Compromise Wellbeing
  - Factors Positively Associated with Wellbeing
  - Practical Tools That Foster Wellbeing
- **30: The Art of Scheduling**
  - Sleep Deprivation
  - Creating the Optimal Shift for Employees
  - Helpful Hints for Day Sleeping
  - Working the Night Shift
  - Conclusion
- **31: Client Communication in an Emergency**
  - **Scenario-Based Training Exercises**
- **32: Management of Pharmaceuticals in the ER**
  - Introduction
  - Drug Shortages
  - Controlled Drugs
  - IV Compatibility
  - Conclusion
  - Index.
