

TABLE OF CONTENTS

Small Animal Microbiomes and Nutrition

Preface

Section I Understanding a Microbiome 1

1 Common Definitions 3

1.1 Microbiome 3

1.2 Microbiota 4

1.3 Pathogens 5

1.4 Symbiosis 8

1.5 Dysbiosis 11

1.6 Probiotics 12

1.7 Prebiotics 15

1.8 Synbiotics 16

1.9 Biological Markers (Biomarkers) and Their Measurement 16

1.9.1 Genes, the Genome, and Genomics 17

1.9.2 Metabolites, the Metabolome, and Metabolomics 19

1.9.2.1 Metabonomics 22

1.9.3 The Proteome and Proteomics 23

Glossary 23

References 25

2 Functions of the Gastrointestinal Microbiome 32

2.1 What Is the Gastrointestinal Microbiome? 32

2.2 Metabolic Functions 32

2.2.1 Short-Chain Fatty Acids 33

2.2.2 Gases	35
2.2.3 Amino Acids	35
2.2.4 Vitamins and Minerals	36
2.3 Structural Functions	37
2.3.1 Tight Junctions and Intestinal Permeability	37
2.4 Protective Functions	38
2.4.1 Bacteriocins	38
2.4.2 Quorum-Sensing	39
2.4.3 Immune Response	39
2.5 Participation in Bidirectional Axis Communication	39
2.6 Chapter Summary	39
References	40

3 The Origin and Development of the Gastrointestinal Microbiome 44

3.1 In Utero	44
3.2 Factors Influencing the Initial Colonization of Microbiota	45
3.2.1 Presentation at Birth	46
3.2.2 Environmental Exposure	47
3.2.3 Diet Type and Method of Feeding	47
3.2.4 Age	48
3.3 Dysbiosis During Microbiome Development	49
3.4 Key Nutritional Factors	53
3.4.1 Maternal Colostrum and Maternal Milk	53
3.4.2 Prebiotics	53
3.4.3 Non-maternal Colostrum	54
3.4.4 Commercial Milk Replacer	55

3.5 Chapter Summary 55

References 55

4 Factors Affecting the Diversity and Density of the Microbiomes 59

4.1 Physiological Factors 60

4.1.1 Genetics 60

4.1.2 Age 60

4.1.3 Sex 62

4.1.4 Nutrition 62

4.1.5 Environment 64

4.2 Pathophysiological Factors 65

4.2.1 Stress 65

4.2.2 Pharmaceutical Therapy 65

4.2.2.1 Antimicrobials 65

4.2.2.2 Other Pharmaceuticals 67

4.3 Chapter Summary 67

References 68

5 Essential Nutrients and the Microbiota 73

5.1 Protein 74

5.1.1 Quantity 75

5.1.2 Quotient 75

5.1.3 Quality 76

5.2 Carbohydrates 77

5.2.1 Simple Carbohydrates 77

5.2.2 Complex Carbohydrates 78

5.2.2.1 Solubility 79

5.2.2.2 Fermentability	79
5.3 Fat	82
5.4 Vitamins and Minerals	82
5.4.1 Vitamins	83
5.4.1.1 Fat-Soluble Vitamins	83
5.4.1.2 Water-Soluble Vitamins	84
5.4.2 Minerals	86
5.5 Processing and Digestibility of Nutrients	87
5.6 Chapter Summary	88
References	89

6 Current Methods for Microbiome Analysis 96

6.1 Introduction	96
6.2 Why is it Important to Characterize the Microbiome?	99
6.3 Sample Collection and Preservation Methods	100
6.4 Current Methods for Microbiome Analysis	101
6.4.1 Microscopy	103
6.4.2 Cultivation	103
6.4.3 Molecular Methods	104
6.4.3.1 Quantitative PCR Panels	104
6.4.3.2 Amplicon Sequencing: 16S, 18S, and ITS	106
6.4.3.3 Metagenomic Sequencing	106
6.4.3.4 Metabolomics	107
6.5 Chapter Summary	108
References	108

7 Microbiome- Centric Management of Dysbiosis 112

7.1 Key Nutritional Factors 113

7.2 Probiotics 114

7.3 Fecal Microbiota Transplantation 115

7.4 Bacteriophages 117

7.5 Chapter Summary 118

References 118

Section II The Microbiome's Involvement in Body Systems 127

8 The Immune System 129

8.1 Innate and Adaptive Immunity 129

8.1.1 Innate Immune System 129

8.1.1.1 Physical Barriers 130

8.1.1.2 Cellular Protection 130

8.1.1.3 Humoral Immune Response 131

8.1.2 Adaptive Immune System 131

8.1.2.1 Lymphocytes 131

8.1.2.2 Antibodies 132

8.1.3 Immune System Maturation 132

8.2 The Microbiome's Involvement in Immunity 132

8.2.1 Germ- Free Animals 133

8.2.2 Intestinal Permeability's Association with the Immune System 133

8.2.3 Cancer's Association with the Immune System and GI Microbiome 134

8.2.3.1 Immunotherapy 135

8.3 Supportive Nutrients 136

8.3.1 Prebiotics 136

8.3.2 Probiotics 137

8.3.3 Postbiotics 137

8.3.3.1 Short Chain Fatty Acids 137

8.3.3.2 Colostrum (Bovine) 137

8.4 Chapter Summary 138

References 139

9 The Endocannabinoid System 141

9.1 Endocannabinoid System 141

9.2 The Endocannabinoidome Axis 142

9.3 Chapter Summary 145

References 146

10 Respiratory System Microbiome 148

10.1 The Respiratory System Microbiome 148

10.2 Factors Affecting Diversity and Density 149

10.3 Diseases Associated with Dysbiosis 152

10.3.1 Asthma 153

10.3.2 Bacterial Pneumonia 153

10.3.3 Upper Respiratory Infection 154

10.4 Key Nutritional Factors 155

10.4.1 Probiotics 155

10.4.2 Minerals, Vitamins, and Antioxidants 155

10.4.3 Omega 3 Fatty Acids 156

10.5 Chapter Summary 156

References 157

11 Oral Microbiomes 159

11.1 The Oral Microbiome 159

11.2 Factors Affecting Diversity and Density 160

11.3 Diseases Associated with Dysbiosis and Inflammation 162

11.3.1 Periodontal Disease 162

11.3.1.1 Stomatitis 164

11.3.1.2 Glossitis 164

11.3.2 Systemic Antimicrobials 164

11.4 Key Nutritional Factors 164

11.5 Chapter Summary 165

References 166

12 Aural Microbiome 167

12.1 The Aural Microbiome 167

12.2 Factors Affecting Diversity and Density 168

12.2.1 Influencing Factors 168

12.2.2 Biofilms 168

12.3 Diseases Associated with Dysbiosis 170

12.4 Key Nutritional Factors 173

12.5 Chapter Summary 173

References 174

13 Integumentary Microbiomes 175

13.1 The Cutaneous Microbiome 175

13.2 Factors Affecting Diversity and Density 176

13.2.1 Environment 176

13.2.2 Diet and the Gut Microbiome 178

13.2.3	Pharmaceuticals	178
13.3	Diseases Associated with Dysbiosis	178
13.3.1	Dysfunctional Barrier Syndrome	178
13.3.2	Atopic Dermatitis	181
13.4	Key Nutritional Factors	182
13.4.1	Protein	182
13.4.2	Essential Fatty Acids	183
13.4.3	Fiber	183
13.4.4	Vitamins	184
13.4.5	Minerals	184
13.5	Chapter Summary	184
	References	185

14 Hepatic Circulation and Bile Acid Involvement with Microbiomes 189

14.1	Hepatic Circulation and Bile Acid Metabolism	189
14.1.1	Primary Bile Acids	190
14.1.1.1	Conjugation of Primary Bile Acids	190
14.1.2	The Function of the Gallbladder and Micelles	190
14.1.3	Recycling of Bile Acids	191
14.1.4	Secondary Bile Acids	192
14.2	Microbiota's Role in Bile Acid Metabolism	192
14.2.1	Deconjugation	192
14.2.2	Dehydroxylation	193
14.2.3	Oxidation and Epimerization	193
14.2.4	Re- Conjugation	194
14.3	Bile and Bile Acids Fundamental Roles in the Regulation of Various Physiological Systems	195

- 14.3.1 Digestion 195
- 14.3.2 Metabolism 195
- 14.3.3 Cell Signaling 195
- 14.3.4 Microbiome Composition 195
- 14.3.5 Immune Homeostasis 195
- 14.3.6 Exogenous and Endogenous Substrate Disposal 196
- 14.3.7 Circulatory System Support 196
- 14.4 Nutrients in Bile 196
 - 14.4.1 Fats (Cholesterol) 196
 - 14.4.2 Proteins 196
 - 14.4.3 Vitamins 197
 - 14.4.4 Other 197
- 14.5 Liver–Gut–Brain Axis 197
- 14.6 Bile Acid Dysmetabolism 199
 - 14.6.1 Diseases Associated with Bile Acid Dysmetabolism 201
 - 14.6.1.1 Aging 201
 - 14.6.1.2 Diabetes Mellitus 202
 - 14.6.1.3 Bile Acid Diarrhea 203
- 14.7 Key Nutritional Factors 203
 - 14.7.1 Water 203
 - 14.7.2 Fat 204
 - 14.7.3 Protein 204
 - 14.7.4 Carbohydrates 204
 - 14.7.5 Fiber 205
 - 14.7.6 Probiotics 205

14.8 Chapter Summary 206

References 207

15 Gastrointestinal Microbiomes 210

15.1 The Gastrointestinal Microbiome 210

15.1.1 The Pharyngeal Microbiome 210

15.1.2 The Esophageal Microbiome 211

15.1.3 The Gastric Microbiome 212

15.1.4 The Intestinal Microbiome 213

15.2 The GI Microbiome's Role in the Production of Vitamins 217

15.3 Conditions Affected by or Associated with the GI Microbiome 217

15.3.1 Chronic Enteropathies 219

15.3.1.1 Antibiotic- Responsive Enteropathy 219

15.3.1.2 Food- Responsive Enteropathy 220

15.3.1.3 Inflammatory Bowel Disease 220

15.3.2 Dietary Hypersensitivity and Atopy 221

15.3.3 Obesity 223

15.3.4 Diabetes Mellitus 223

15.3.5 Neoplasia 224

15.3.6 Congestive Heart Failure 225

15.3.7 Chronic Kidney Disease 225

15.4 Chapter Summary 226

References 226

16 Neurological Interactions with Microbiomes 234

16.1 The Nervous System 235

16.2 The Gut–Brain Communication Axis 237

16.2.1	Enteroendocrine and Neuroendocrine Cells	237
16.2.2	Microbial Metabolites	238
16.2.2.1	Gastrotransmitter – Gas Metabolites	239
16.2.2.2	Short- Chain Fatty Acids	240
16.2.2.3	Neurotransmitters	242
16.2.2.4	GI Microbiota- Derived Cellular Components	244
16.2.3	The Importance of Barrier Function	244
16.3	Anxiety	245
16.4	Cognitive Dysfunction	247
16.5	Psychobiotics	249
16.6	Nutrients	250
16.6.1	Simple Carbohydrates	250
16.6.2	Fat and Essential Fatty Acids	250
16.6.2.1	Medium- Chain Triglycerides (MCT)	250
16.6.2.2	Omega 3 Fatty Acids	251
16.6.3	Vitamin and Mineral “Brain Blend”	251
16.6.4	Fiber Sources – Oligosaccharides	252
16.7	Chapter Summary	252
	References	254

17 Urinary System 258

17.1	GI–Renal Axis	258
17.2	Urobiome	261
17.2.1	Urinary Tract Infections	261
17.2.2	Biofilm in the Bladder	264
17.3	Defenses Against Urinary Tract Infections	265

17.3.1 Innate Immune System's Role 265

17.3.1.1 Bacterial Interference 265

17.3.1.2 Pilicides and Curlicides 266

17.4 Key Nutritional Factors 266

17.4.1 Mannose (D- Mannose) 266

17.5 Chapter Summary 267

References 267

Section III Emerging Ingredients and Alternative Diets 269

18 Raw Ingredient Diets 273

18.1 Raw vs Cooking 274

18.1.1 Starches and Vegetables 274

18.1.2 Meat (Protein) 275

18.2 Comparing Extruded, Canned, and Raw 277

18.3 Antimicrobial Resistance 279

18.4 Fermented Products 282

18.5 Chapter Summary 283

References 284

19 Grain and Gluten- Free Diets 288

19.1 Grains 288

19.1.1 Nutrients from Grains 289

19.1.1.1 Fiber 289

19.1.1.2 Lipids 289

19.1.1.3 Phenolics 290

19.1.2 Obesity's Relationship to Grains 290

19.1.3 Processing's Effect on Grain Nutrient Profile 291

19.2 Gluten 291

19.3 Chapter Summary 291

References 292

20 Cannabinoids 293

20.1 Regulations on Cannabis Products 293

20.2 By- products of the Plant as an Ingredient Source 294

20.3 Concerns About the Health and Safety of Cannabis Products in Animal Feed
295

20.4 Cannabidiol Supplementation Effects on the Microbiome 295

20.5 Antimicrobial Effects of Cannabis 297

20.6 Current Diets on the World Pet Food Market 298

20.7 Chapter Summary 298

References 298

21 Insects 301

21.1 Black Soldier Fly Larvae 301

21.1.1 Adjustable Nutrient Profile 302

21.1.2 Natural Decomposers 302

21.1.3 Non- Disease Vector Species 302

21.1.4 Reduce Pathogen and Other Vermin on Decaying Matter 302

21.1.5 Production of Antimicrobial Peptides 302

21.1.6 BSFL GI Microbiome 303

21.1.7 Probiotics for BSFL 303

21.2 Heavy Metal and Mycotoxin Accumulation in Insects 304

21.3 Chitin 304

21.4 The Effects on the Host GI Microbiome 305

21.5 Chapter Summary 307

References 307

Section IV Communication and Nutrition Plans for Pet Parents 311

22 Communicating with Pet Parents 313

22.1 From the Pet Parent Perspective 313

22.2 How the Brain Processes New Information 314

22.2.1 The Protection Motivation Theory 314

22.2.1.1 Receipt of Knowledge 314

22.2.1.2 Threat Appraisal 316

22.2.1.3 Coping Appraisal 316

22.2.1.4 Behavior or Intention 317

22.3 Improving Action Results 318

22.3.1 Steps to Create a Successful Action Plan 318

22.3.1.1 Step 1 Identify the Threat 318

22.3.1.2 Step 2 Develop a Plan 318

22.4 Supporting Pet Parents Through the Decision- Making Process 319

22.4.1 Dr. Google 319

22.4.2 Provide Learning Tools 320

22.4.3 Understanding Financial Constraints 320

22.5 Improving Conversations 322

22.5.1 Lose the Judgment – Validate Pet Parents Emotions 322

22.6 Providing Continuing Support to Pet Parents 323

22.6.1 Staying in Touch 323

22.6.2 How Often to Request Contact 325

22.7 Chapter Summary 325

References 326

23 Documenting a Nutrition History 328

23.1 How to Ask the Right Questions 328

23.1.1 Closed- Ended Questions 328

23.1.2 Open- Ended Questions 329

23.1.3 Probing Questions 329

23.1.4 Using Appropriate Tone 330

23.1.5 Timing Is Everything 330

23.2 Nutrition Questionnaire 330

23.2.1 What to Include in a Nutrition History 331

23.2.1.1 A More In- Depth History Form Should Inquire about 332

23.3 Chapter Summary 333

References 334

24 Dietary Treatment Plans 335

24.1 Pet Parents Want Veterinary Nutrition Recommendations 335

24.2 Increasing the Value of Nutrition Plans 335

24.3 Components of a Nutrition Plan 336

24.3.1 Diet Recommendation 337

24.3.2 Caloric Goals 337

24.3.2.1 Main Meal(s) 337

24.3.2.2 Treat Goals 337

24.3.3 Timeline 337

24.3.3.1 Action Plan 338

24.3.3.2 Information About the Pet's Condition or Life Stage 338

24.4 Chapter Summary 338

References 339

25 Calculations for the Nutrition Consultation 340

25.1 Energy Requirements 340

25.1.1 Resting Energy Requirements 340

25.1.2 Maintenance Energy Requirements 342

25.1.3 Calculation for Growth 342

25.1.4 Calculating for Pregnancy 342

25.1.5 Calculating for Lactation 343

25.2 Calculating kcal/cup or kcal/can from Energy Requirement 343

25.2.1 Formulations 344

25.2.1.1 Calculating Diet 1 kcal where a Set Percentage of the can/cup or Multiple cans(cups) Volumes are Predetermined 344

25.3 Calculating kcal per day by Weight (grams) 344

25.4 Calculating Calories from Nutrients and Metabolizable Energy 345

25.4.1 Calculating NFE 345

25.4.2 Calculating % of kcals from the Macronutrients 345

25.4.3 Calculating Metabolizable Energy 345

25.5 Calculating Percentage of Body Weight Loss 346

25.6 Calculating Energy Requirements for a Critical Care Patient 346

25.7 Calculating Water Requirements 347

25.8 Calculating Metabolic Water 347

25.9 Feeding and Transition Plan Formulations 347

25.9.1 Calculating Meals by kcal per Meal 347

25.9.2 Calculating Meals by Volume per Meal 347

25.10 Creating a Feeding Plan 348

25.10.1 General Guidelines for Diet Transitions 348

25.10.2 Immediate Diet Transition (For Critical Care and Initial Calorie Restricted Diet Changes) 348

25.11 Chapter Summary 348

References 350
