

TABLE OF CONTENTS

The Genetics and Genomics of the Rabbit

- 1: The order Lagomorpha and the evolution and domestication of the European rabbit (*Oryctolagus cuniculus*)
- 2: Rabbit breeds and lines and genetic resources
- 3: The genome of the European rabbit and genomic tools
- 4: Cytogenetics, genetic maps and QTL mapping in the rabbit
- 5: Immunogenetics in the rabbit
- 6: Genetics and molecular genetics of coat colour in the European rabbit
- 7: Genetics of fibre and fur production in rabbits
- 8: Genetics and molecular genetics of morphological and physiological traits and inherited disorders in the European rabbit
- 9: Genetics of disease resistance in the European rabbit
- 10: Genetics of growth, carcass and meat production traits in rabbits
- 11: Biology of reproduction and reproduction technologies in the rabbit
- 12: Genetics of reproduction in the rabbit
- 13: Genetic improvement in the meat rabbit
- 14: Rabbit research in the post-genomic era: transcriptome, proteome and metabolome analyses
- 15: Methods to create transgenic and genome edited rabbits
- 16: Pluripotent stem cells in rabbits
- 17: Biotechnology applications in the rabbit
- 18: The rabbit as biomedical model.
