

# TABLE OF CONTENTS

## The Genetics of the Dog, 2<sup>nd</sup> Edition

- 1 Canid phylogeny and the origin of the domestic dog
- 2 Experimental studies of early canid domestication
- 3 Genetic diversity and phylogenetic relationships of dog breeds
- 4 Molecular genetics of coat colour, texture and length
- 5 Mendelian traits in the dog
- 6 Immunogenetics
- 7 Genetic aspects of orthopaedic disorders in the dog
- 8 Genetics of cancer in dogs
- 9 Genetics of neurological disease in the dog
- 10 Genetics of eye disorders in the dog
- 11 Cytogenetics and chromosome maps
- 12 Canine genomics
- 13 Genetics of canine behavioural disorders
- 14 Biology of reproduction and modern reproductive technology
- 15 Developmental genetics
- 16 Genetics of morphological traits
- 17 Olfactory genetics
- 18 Pedigree analysis, genotype testing and genetic counselling
- 19 Genetics of quantitative traits and improvement of dog breeds
- 20 Complex traits
- 21 Canine model in medical genetics
- 22 Genetic aspects of performance in working dogs
- 23 Genetic nomenclature.
