

TABLE OF CONTENTS

• **Part I: Adipose Tissue**

Chapter 1. In vivo imaging and quantification of regional adiposity in zebrafish

- Introduction
- 1. Rationale
- 2. Materials
- 3. Methods
- 4. Summary

Part II: Innate and Adaptive Immune Systems

Chapter 2. Innate immune cells and bacterial infection in zebrafish

- Introduction
- 1. Quantifying the Innate Immune Cell Response to Bacterial Infection
- 2. Bioassays for Assessing Neutrophil Bactericidal Function
- 3. Bioassays for Assessing Macrophage Bactericidal Function
- 4. Drug Discovery Platform to Identify New Immunomodulatory Drugs

Chapter 3. Best practices for germ-free derivation and gnotobiotic zebrafish husbandry

- Introduction
- 1. Experimental Procedures
- 2. Prospectus
- 3. Solutions

Chapter 4. Infectious disease models in zebrafish

- Introduction
- 1.. Methods for Systemic Bacterial and Viral Infections
- 2.. Methods for Localized Bacterial and Viral Infections
- Conclusion

Chapter 5. Live imaging the earliest host innate immune response to preneoplastic cells using a zebrafish inducible KaTA4-ERT2/UAS system

- Introduction
- 1. Generation of Preneoplastic Cell Clones Using the KaTA4-ERT2/UAS System in Zebrafish Larvae
- 2. Live Imaging Preneoplastic Cell: Neutrophil Interaction Using Confocal Microscopy
- 3. Image Analysis and 4D Reconstruction
- Conclusion

Chapter 6. Studying the adaptive immune system in zebrafish by transplantation of hematopoietic precursor cells

- Introduction
- 1. Methodology for the Transplantation of Hematopoietic Cells
- 2. Discussion
- 3. Future Directions

Part III: Blood and Lymph

Chapter 7. Hematopoietic stem cell development: Using the zebrafish to identify extrinsic and intrinsic mechanisms regulating hematopoiesis

- Introduction to Hematopoietic Development
- 1. Use of Zebrafish to Investigate Hematopoietic Stem Cell Development
- 2. Zebrafish Tools and Protocols

Chapter 8. Studying disorders of vertebrate iron and heme metabolism using zebrafish

- 1. Overview of Vertebrate Cellular Iron and Heme Metabolism
- 2. Advantageous Properties of Zebrafish to Study Genetics
- 3. Tools to Study Iron and Heme Metabolism Using Zebrafish
- Conclusions and Future Directions

Chapter 9. The lymphatic vasculature revisited—new developments in the zebrafish

- 1. Development of the Lymphatic System in the Zebrafish Trunk
- 2. Molecular Mechanisms Regulating Lymphatic Cell Fate Specification
- 3. Vegfc Signaling and Sprouting From the Posterior Cardinal Vein
- 4. Parachordal Lymphangioblast Migration at the Level of the Horizontal Myoseptum
- 5. Development of Lymphatic Structures in the Head and the Gut
- Concluding Remarks

Part IV: Visceral Organs

Chapter 10. Modeling intestinal disorders using zebrafish

- 1. Intestinal Development, Morphology, and Physiology
- 2. Intestinal Microbiota and Host–Microbe Interactions
- 3. Intestinal Inflammatory Conditions
- 4. Enteric Nervous System and Motility Disorders
- 5. Intestinal Tumorigenesis and Cancer
- Concluding Remarks

Chapter 11. Analysis of pancreatic disease in zebrafish

- Introduction
- 1. Method 1. Fasting Adult Zebrafish
- 2. Method 2. Weighing Live, Swimming Zebrafish Without Anesthetic
- 3. Method 3. Glucose Delivery to Adult Zebrafish Using Intraperitoneal Injection
- 4. Method 4. Dissection of the Pancreas, En Bloc, for Histology
- 5. Method 5. Sterile Dissection and Culture of the Principal Islet

Part V: Musculoskeletal System

Chapter 12. Using the zebrafish to understand tendon development and repair

- Introduction
- 1. Tendon Structure
- 2. Tendon Formation and Differentiation
- 3. Tissue Interactions Within the Developing Musculoskeletal System
- 4. Methods to Study the Embryonic Tendon Program in Zebrafish
- Conclusion

Chapter 13. Small teleost fish provide new insights into human skeletal diseases

- Introduction
- 1. A Fresh View on the Teleost Skeleton and Its Special Characters
- 2. Analyzing Skeletal Phenotypes of Small Fish
- 3. Mutant and Transgenic Fish Open New Directions in Skeletal Research
- 4. Genetic Phenocopies of Human Skeletal Diseases
- 5. Lifelong Tooth Replacement
- Concluding Remarks

Chapter 14. Muscular dystrophy modeling in zebrafish

- Introduction
- 1. Muscular Dystrophies and the Dystrophin-Associated Glycoprotein Complex
- 2. Skeletal Muscle Properties in Zebrafish
- 3. Models of Muscular Dystrophy in Zebrafish
- 4. Small Molecule Screens
- Conclusions

Part VI: Central and Sensory Nervous Systems

Chapter 15. Analysis of myelinated axon formation in zebrafish

- Introduction
- 1. Visualization of Myelinating Glia in Zebrafish
- 2. Genetic Analysis of Myelin Development in Zebrafish
- 3. Pharmacological Manipulation of Myelinated Axons in Zebrafish

- 4. Plasticity, Maintenance, and Regeneration of Myelinated Axons in Zebrafish
- Conclusions

Chapter 16. Zebrafish models of human eye and inner ear diseases

- Introduction
- 1. Zebrafish Models of Eye Disease
- 2. Zebrafish Models of Ear Disease
- 3. Zebrafish Models of Syndromes Affecting Eye and/or Ear
- Conclusion

Part VII: Cancer

Chapter 17. A zebrafish xenograft model for studying human cancer stem cells in distant metastasis and therapy response

- Introduction
- 1. Establishment of Human Cancer Stem Cells Xenograft Model
- 2. Analysis of Interaction Between Cancer Stem/Progenitor-Like Cells and Microenvironment
- 3. Genetic and Chemical Targeting of Tumor-Stroma Interactions in Cancer Stem/Progenitor-Like Cells–Xenograft
- Conclusion

Chapter 18. Zebrafish as a model for von Hippel Lindau and hypoxia-inducible factor signaling

- Introduction
- 1. Hypoxic Signaling
- 2. Hypoxic Signaling: Overview of the Zebrafish Orthologues
- 3. The Zebrafish HIF Genes
- 4. HIF Protein Expression
- 5. The HIF Hydroxylases
- 6. The VHL Genes
- 7. HIF Binding Sites in the Genome
- 8. Hypoxic/HIF Target Gene Comparison
- 9. Hypoxic Signaling Reporters in Zebrafish
- 10. Links Between HIF and the Circadian Clock
- 11. Zebrafish VHL Mutants as Models of Hif Hyperactivation
- 12. Hematopoietic and Angiogenic Phenotypes in VHL Mutants
- 13. Vhl/HIF Effects on Metabolism
- 14. Kidney Defects in VHL Mutants and Cancer
- 15. Links Between VHL HIF and P53
- Appendix A. Supplementary data

Chapter 19. Discovering novel oncogenic pathways and new therapies using zebrafish models of sarcoma

- Introduction

- 1. Rhabdomyosarcoma
- 2. Malignant Peripheral Nerve Sheath Tumors
- 3. Ewing's Sarcoma
- 4. Chordoma
- 5. Hemangiosarcoma
- 6. Liposarcoma
- 7. Future Perspectives and Opportunities

Chapter 20. Zebrafish models of leukemia

- 1. T-Cell Acute Lymphoblastic Leukemia
- 2. B-Cell Acute Lymphoblastic Leukemia
- 3. Myeloid Malignancies
- Conclusions

Chapter 21. Investigating microglia-brain tumor cell interactions in vivo in the larval zebrafish brain

- Introduction
- 1. Methods
- 2. Summary

Part VIII: Transplantation

Chapter 22. Transplantation in zebrafish

- Introduction
- 1. Rationale
- 2. Methods
- 3. Discussion

Part IX: Chemical Screening

Chapter 23. Chemical screening in zebrafish for novel biological and therapeutic discovery

- Introduction
- 1. Rationale
- 2. Materials and Methods
- 3. Discussion/caveats
- Summary
