

TABLE OF CONTENTS

- Chapter 1. The origin and evolution of the Toxicofera reptile venom system
- Chapter 2. Signs, symptoms and treatment of envenomation
- Chapter 3. Antivenom research and development
- Chapter 4. Ineffective traditional and modern techniques for the treatment of snakebite
- Chapter 5. Maintaining venomous animal collections: protocols and occupational safety
- Chapter 6. Veterinary care of venomous reptiles
- Chapter 7. Research methods
- Chapter 8. Three finger toxins (3FTx)
- Chapter 9. Beta-defensins
- Chapter 10. Cysteine-rich secretory proteins (TV-CRiSP)
- Chapter 11. Exendin peptides
- Chapter 12. Factor Va proteins (TV-fVa)
- Chapter 13. Factor Xa enzymes (TV-fXa)
- Chapter 14. Kallikrein enzymes (TV-kallikrein)
- Chapter 15. Kunitz peptides (TV-kunitz)
- Chapter 16. L-amino acid oxidase enzymes (TV-LAAO)
- Chapter 17. Lectin peptides (TV-lectin)
- Chapter 18. Lizard venom B-type natriuretic peptides (LV-BNP)
- Chapter 19. Snake venom C-type natriuretic peptides (SV-CNP)
- Chapter 20. Group-I phospholipase A2 enzymes (TV-PLA2-GI)
- Chapter 21. Group-II phospholipase A2 enzymes (TV-PLA2-GII)
- Chapter 22. Sarafotoxin peptides
- Chapter 23. Snake venom metalloprotease enzymes (SVMP)

Chapter 24. Lesser-known or putative reptile toxins

Chapter 25. Poisonous snakes and bacteria as a Komodo dragon weapon: which is a myth and which is reality?
