List of contributors	v
Foreword	vii
Preface	viii
Section 1: Lameness investigation	
1 Normal locomotion <i>Neil Burton and Gordon Brown</i>	1
2 Lameness examination <i>Harry Scott</i>	7
3 Imaging <i>Thomas W. Maddox</i>	22
4 Sampling and laboratory investigation <i>Emma Scurrrell and Gareth Arthurs</i>	42
Section 2: Musculoskeletal disorders	
5 The normal joint <i>Richard Barrett Jolley and Rebecca Lewis</i>	55
6 Arthritis <i>Ralph Abercromby, John Innes and Dylan Clements</i>	65
7 Diseases and disorders of bone <i>Gareth Arthurs and Sorrel Langley-Hobbs</i>	87
8 Disturbances of growth and bone development <i>Gareth Arthurs and Sorrel Langley-Hobbs</i>	106
9 Muscle, tendon and ligament injuries <i>Angus Anderson</i>	132
10 Diseases of muscle and the neuromuscular junction <i>G. Diane Shelton</i>	145
11 Tumours of the musculoskeletal system <i>Nicholas J. Bacon</i>	154
12 Neurological causes of lameness <i>Sebastien Behr and Simona Tiziana Radaelli</i>	167

Section 3: Principles of orthopaedic surgery

13	Principles of orthopaedic surgery <i>Rob Pettitt</i>	187
14	Surgical instruments and implants <i>John Lapish and David Strong</i>	200
15	Arthroscopy <i>Bernadette Van Ryssen and John Lapish</i>	219
16	Complications of orthopaedic surgery <i>Simon Roch</i>	230
17	Postoperative management and rehabilitation <i>Briony Alderson, Rob Pettitt and Louise Dale</i>	241

Section 4: Management of specific disorders, ordered by individual joints

18	The shoulder <i>Steve Butterworth and Rob Pettitt</i>	252
19	The elbow <i>Neil Burton</i>	287
20	The carpus <i>Stephen Clarke and Jonathan Pink</i>	330
21	The distal limb <i>Mike Guilliard</i>	346
22	The hip <i>Toby J. Gemmill and Bill Oxley</i>	369
23	The stifle <i>Mike Farrell</i>	404
24	The tarsus <i>Rob Pettitt, Gareth Arthurs, Brian Beale and Don Hulse</i>	447
25	The temporomandibular joint <i>Andy Moores</i>	472
	Index	483

Operative Techniques: grading system

The editors have graded each of the OT surgical procedures by complexity to help the reader understand whether the procedure is one that they should consider attempting.

This technique can be achieved by surgeons with limited orthopaedic skill and experience.

This technique requires moderate experience and skill.

This is an advanced technique.
