- Preface
- About the editors
- Contributors
- List of Tables
- List of Illustrations
- 1. Behavioral medicine and the general practitioner
 - Behavioral medicine is the standard of care
 - Behavioral training for the veterinary care team
 - Providing behavioral services in practice
 - The team approach to behavioral medicine
 - The economics of providing behavioral services
 - Conclusion
 - References
 - Recommended reading
- 2. Developmental, social, and, communicative behavior
 - Introduction
 - Canine development
 - Canine social behavior and communication
 - Canine senses and their role in communication
 - Communication concepts and body language signals

- Behavior patterns
- Feline development
- Social behavior and communication in cats
- Feline senses
- Communication concepts and body language signals
- References
- Resources and recommended reading
- 3. Pet selection and the genetics of behavior
 - Pet selection
 - Behavioral genetics
 - Conclusion
 - References
 - Resources and recommended reading
 - Internet (web) resources
- 4. Pets and the family dynamic
 - Introduction
 - Considerations when selecting a dog for a family with children
 - Preparing pets and children to live together
 - Preparing a puppy for a child in the home
 - Preparing a kitten for a child in the home
 - Preparing an adult dog for a child in the home
 - Preparing an adult cat for a child in the home
 - Introducing the baby to the pets
 - Interactions change as the child grows
 - Nonfamily dogs
 - Final thoughts
 - References
 - Resources and recommended reading
- 5. Prevention: The best medicine
 - Introduction

- Setting the pet up for success
- Working with new puppies and kittens – the team approach
- Socialization
- Puppy class and kitty kindergarten
- Foundational concepts for pet parent education
- Environmental enrichment
- Play
- Handling and restraint
- Conclusion
- References
- Resources and recommended reading
- 6. All body systems affect behavior
 - Introduction
 - Is it physical or behavioral? Often, it is both!
 - Specific body systems and their contribution to behavioral clinical signs
 - Medications that can cause behavioral side effects
 - Pain and its effects on behavior
 - Assessing chronic pain
 - References
 - Resources and recommended reading
- 7. Physiologic stress and its effect on health and welfare
 - Introduction
 - What is stress?
 - How stress and behavior affect physical and mental health
 - Direct effects of behavior on health
 - Stress and behavioral health
 - Stress management
 - Conclusion
 - References
 - Reading and resources

- 8. The effects of aging on behavior in senior pets
 - Introduction
 - Age-related changes in cognition and behavior
 - Epidemiology of behavior problems in senior pets
 - Cognitive dysfunction syndrome
 - Approach to the senior pet appointment
 - Neuropathology of brain aging
 - Threshold theory of behavior change
 - Causes of senior pet behavior problems
 - The role of stress in health and behavior
 - Diagnosis of behavior problems in senior pets
 - Diagnosis of cognitive dysfunction syndrome
 - Behavior problems of senior pets
 - Treatment of common behavior problems in senior pets
 - Treatment of cognitive dysfunction
 - References
 - Resources and recommended reading
- 9. Approach to the diagnosis and treatment
 - Introduction
 - Differing perspectives on the diagnosis and treatment of behavioral changes
 - Causes of behavioral pathology
 - The threshold theory of behavior change
 - Undesirable and pathologic behavior
 - Steps for evaluation, diagnosis, and treatment
 - Gathering history
 - Treatment
 - Conclusion
 - References
 - Resources and recommended reading
- 10. Behavioral treatment techniques, behavior modification, and learning theory

- Introduction
- Foundational concepts
- Behavior modification techniques and protocols
- Conclusion
- References
- Resources and recommended reading
- 11. Pharmacologic intervention in behavioral therapy
 - Introduction
 - Evidence-based medicine and veterinary behavioral and psychiatric pharmacology
 - Considerations before prescribing
 - Factors specific to psychotropic medications
 - When should a medication be added to the behavioral treatment plan?
 - Classification and selection of psychotropic medications
 - Main classes of psychotropic medications
 - Psychotropic medications and P450 enzyme inhibition
 - Serotonin syndrome
 - Combination/augmentation therapy
 - References
 - Resources and recommended reading
- 12. Treatment – integrative medicine
 - What is integrative medicine?
 - Is integrative medicine safer and more effective?
 - Dietary supplementation
 - Herbal therapy (phytotherapy) and nutraceuticals
 - Veterinary nutraceuticals and therapeutic supplements
 - Pheromone therapy
 - Aromatherapy
 - Homeopathy
 - Bach flower remedies
 - Acupuncture

- Therapeutic touch
- Magnetic field therapy
- Veterinary chiropractic
- Vibrational therapy
- Music therapy
- Pressure garments
- Conclusion
- References
- Resources and recommended reading
- 13. Feeding and diet-related problems
 - Introduction
 - Normal ingestive behavior
 - The impact of feeding strategy and diet on welfare
 - The physiological influence of diet on behavior
 - Dietary ingredients and behavior
 - Commercial diets with efficacy in behavioral medicine
 - Diagnosis of diet-related behavior problems
 - Treatment of diet-related behavior problems
 - Prevention of diet-related behavior problems
 - Ingestive behavior problems
 - References
 - Recommended reading
- 14. Fears, phobias, and anxiety disorders
 - Introduction
 - Clinical presentations of fear-induced behaviors: Sensitivity, fear, anxiety, and phobia
 - Diagnoses related to fear, anxiety, and phobia
 - Neurobiology of fear: The stress response
 - Neuroanatomy of fear
 - Development of fearful behavior
 - Ontogeny of fear

- Clinical signs associated with fear, phobia, and anxiety in pets
- Prevention
- Foundational treatment concepts
- Prognosis
- Fear of people
- Fear of animals
- Fear of places
- Prevention
- Conclusion
- References
- 15. Noise aversion
 - Introduction
 - Diagnosis and potential outcomes
 - Management
 - Treatment
 - Discussion
 - Conclusion
 - References
 - Resources and recommended reading
- 16. Reducing fear, anxiety, and stress in veterinary clinics
 - The problem with the status quo
 - Fear, anxiety, stress, conflict, panic, phobia, pain, and nausea
 - Hospital strategies to maximize patient comfort and safety
 - At-home preappointment preparation
 - Crates, carriers, and car rides
 - Hospital flow and location setup
 - The animal centric approach
 - Cooperative care for the fearful pet
 - Scheduling technician/nurse sessions as a value-added service
 - Managing fearful and aggressive pets

- Pharmacologic management of fearful and aggressive pets
- Home care instructions
- Conclusion
- References
- Resources and recommended reading
- 17. Separation-related disorders
 - Introduction
 - Prevalence
 - Precipitating factors
 - Prevention
 - Diagnosis and potential outcomes
 - Prognosis
 - Treatment
 - Help the pet parent understand
 - Management
 - Behavior modification
 - Medication
 - Conclusion
 - Handout
 - References
 - Resources and recommended reading
- 18. Abnormal repetitive behaviors: Stereotypies and compulsive disorders
 - Introduction
 - Problem overview
 - Pathogenesis of repetitive disorders
 - Pathophysiology of repetitive disorders
 - Prevention
 - Diagnosis and potential outcomes
 - Management
 - Treatment

- Specific repetitive behaviors
- Repetitive disorders with neurological and locomotor signs
- Repetitive disorders with oral or ingestive signs
- Psychogenic polydipsia
- Repetitive disorders involving excessive grooming and/or self-trauma
- Hyperesthesia in dogs and cats
- Prognosis
- Conclusion
- References
- Resources and recommended reading
- 19. Unruly and destructive behaviors – canine
 - Introduction
 - Approach to diagnosis and treatment in general practice
 - Jumping on people
 - Stealing and trash raiding
 - Getting on furniture
 - Pulling/forging ahead on lead
 - Excessive barking
 - Unruliness
 - Destructive behaviors
 - Digging
 - Nocturnal activity
 - Conclusion
 - References
 - Resources and recommended reading
- 20. Unruly and destructive behaviors – feline
 - Introduction
 - General behavior modification principles
 - Destructive behavior
 - Jumping on counters and climbing

- Excessive nocturnal activity in cats
- Excessive vocalization
- Conclusion
- References
- Recommended reading and resources
- 21. House soiling – canine
 - Introduction
 - The importance of preventive counseling
 - Problem overview
 - Troubleshooting house training
 - Signaling
 - Challenging circumstances
 - Crate soiling
 - House soiling related to physical conditions
 - House soiling secondary to fear or anxiety
 - Marking
 - The geriatric patient
 - Conclusion
 - References
 - Recommended reading
- 22. House soiling – feline
 - Introduction
 - Terminology
 - Normal feline elimination behavior and preferences
 - Etiology and predisposing factors
 - Prevention
 - Diagnoses
 - Treatment
 - Approach to diagnosis and treatment in general practice
 - First appointment

- Second appointment
- Third appointment
- Medications and supplements
- Prognosis
- Conclusions
- References
- Recommended reading and resources
- 23. Canine aggression
 - Introduction
 - Normal canine behavior
 - The body language of aggression
 - Pathology of aggression
 - Learning and aggression
 - Prevalence
 - Etiology and predisposing factors
 - Prevention
 - Approach to diagnosis and treatment in general practice
 - Categories of diagnoses
 - Aggression qualifiers
 - Prognosis
 - Treatment essentials
 - Treatment specifics
 - Aggression to familiar and unfamiliar adults (pain, FASCP)
 - Aggression on walks
 - Possessive aggression
 - Play aggression or undesirable play behavior
 - Interdog aggression
 - Maternal aggression
 - Medications
 - Diet and supplements

- References
- Recommended reading
- 24. Feline aggression
 - Introduction
 - Normal feline behavior
 - The body language of aggression
 - Learning and aggression
 - Prevalence
 - Etiology and predisposing factors
 - Prevention
 - Approach to diagnosis and treatment in general practice
 - History
 - Assessment of overall health and wellness
 - Diagnosis
 - Prognosis
 - Treatment
 - Behavior modification
 - Conclusion
 - References
 - Recommended reading
- 25. The psychobiological approach to problem behavior assessment
 - What is a behavioral diagnosis?
 - Approaches used in clinical animal behavior
 - Behavioral problems as functional states and the importance of impulsivity
 - Impulsivity
 - Frustration
 - Positive and negative activation
 - Other behavior scales
 - Conclusion
 - References

- Recommended reading
- Appendix A Behavior resources
- Appendix B Medication dosages
- Appendix C Resources for veterinarians
- Forms and handouts
- Index.
