

Table of Contents

1

What is chronic pain?

Introduction

Nociception

Transmission

Anatomy of nerve pathways

Transduction: neurotransmitters involved in chronic pain

Cellular metabolic mechanisms of chronic pain

Perception and classification of chronic pain

Pain modulation process

Spinal control

Supraspinal control

Cortical control

Pain chronification

2

Diagnosis of chronic pain

syndrome

Introduction

Stress

Behavioural changes in states of continuous pain

Diagnostic approach for a patient with pain

Detailed anamnesis

Physical examination

Blood test

 Orientative analytical parameters

Complementary diagnostic techniques

 Thermography

 Techniques for assessing neurophysiological function

Pain scales used in animals

3

Treatment of chronic pain

Introduction

Pharmacological therapy

Anti-inflammatories

 Nonsteroidal anti-inflammatory drugs

 Corticosteroids

Opioids

 Mechanism of action of opioids

 Routes of opioid administration

 Opioids used in veterinary medicine

Antidepressants

Tricyclic antidepressants
Selective serotonin reuptake inhibitors
Selective serotonin–noradrenaline reuptake inhibitors

Anticonvulsants

Amantadine

Growth factors

Local anaesthetics

Routes of administration
Most commonly used drugs

α -adrenergic receptor agonists

Medetomidine
Dexmedetomidine

Cannabinoids

Capsaicin

Ketamine

Routes of administration

Experimental drugs

4

Types of chronic pain

Introduction

Visceral pain

Chronic pancreatitis

Chronic renal failure

Uraemic polyneuropathy
Osteoarthritis: joint pain

Pain due to cancer

Analgesic drugs in oncology

Anti-inflammatories: NSAIDs and corticosteroids

- Analgesics
- Local anaesthetics
- Antiemetics
- Anticonvulsants
- NMDA receptor antagonists
- Bisphosphonates
- Other drugs

Geriatric pain

Analgesic drugs in geriatric patients

Diabetic neuropathy

Treatment of diabetic neuropathy

Joint pain

Treatment of joint pain

- Joint stress stage
- Bone inflammation phase
- Bone reorganisation stage
- Degenerative stage

Radicular pain

Treatment of radicular pain

- Corticosteroids
- Opioids
- Muscle relaxants
- NSAIDs
- Local anaesthetics
- Neurolytic agents
- Adjuvant analgesics
- Other therapies

5

Interventional therapies

Introduction

Ablative techniques

Peripheral neurectomy

Rhizolysis

Facet rhizolysis

Cordotomy

Dorsal root entry zone (DREZ) lesion

Decompression techniques

Discolysis

Neuromodulatory techniques

Neurostimulation

Spinal infusion

Electrotherapy

Transcutaneous electrical neurostimulation (TENS)

Interferential currents

Ultrasound

Shockwave therapy

Diathermy

Neuromuscular therapy

6

Functional recovery of a painful limb Case descriptions

Introduction

Case 1 Shiba

Golden Retriever, aged 14 years

Case 2 Terry

A mixed breed, 30-kg dog with leishmaniasis

Case 3 Pepa

Yorkshire Terrier, aged 5 years

Case 4 Admiral

Labrador, aged 2 years

Case 5 Terry

Golden Retriever, aged 10 years

Case 6 Miko

Dachshund, aged 6 years
