Section A

Introduction of diseases

1. General aspects of introduction to diseases, diagnosis, and management of dogs and cats

Ranbir Singh Jatav, Aditya Pratap, Nitin Vaishnav, and Neha Sharma

1. Introduction	3
2. Diagnosis and management of various diseases of dog and cat	3
2.1 General systemic condition	3
2.2 Diseases of cardiovascular system	4
2.3 Diseases of digestive system	5
2.4 Diseases of respiratory system	6
2.5 Diseases of urinary system	7
2.6 Diseases of nervous system	8
2.7 Deficiency diseases	9
2.8 Dermatological disorder	9
2.9 Endocrine disorder in dogs and cats	10
2.10 Neonatal diseases	11
2.11 Bacterial diseases	11
2.12 Viral disease	12
2.13 Fungal disease of dogs and cats	13
2.14 Parasitic diseases of canine and feline	13
2.15 Protozoal diseases of dogs and cats	15
2.16 Hereditary diseases in dogs and cats	16

2. Biological system of dogs and cats and its clinical management

Avnish Kumar Gautam, Manoj Kumar Sinha, Sanjay Kumar Bharti, and Anil Kumar

1. Introduction	19
2. Musculoskeletal system of dog and cat	19
2.1 Skull	19

3. Digestive system	21
3.1 Salivary glands	22
3.2 Pharynx	22
3.3 Esophagus	22
3.4 Stomach	23
3.5 Small intestine	23
3.6 Large intestine	23
3.7 Liver	23
3.8 Pancreas	23
4. Respiratory system	24
5. Male reproductive organs of dog and cat	24
6. Female reproductive organs of bitch and queen	26
7. Mammary glands	26
8. Urinary system	26
9. Endocrine system	26
10. Sense organ	27
10.1 Ear	27
10.2 Clinical importance of surface anatomy	28
11. Common disorders of dog and its clinical management	29
12. Common endoparasitic infestation in dogs and cats	30
13. Common disorders of cat and its clinical management	31
14. Vaccination schedule: Dogs and puppies	32
15. Feline vaccination schedule	32
References	33

3. Nutritional strategies of dogs and cats

Amitava Roy, Abhishek Pathak, Alok Mishra, and Tanmoy Rana

1. What is nutritionally balanced dog food?	35
1.1 Balanced dog food should meet your dog's energy requirements	35
2. Protein in dog food	36
2.1 Sources of protein in dog food	36
2.2 What does crude protein mean?	36
2.3 How much protein does my dog need?	36
2.4 Can dogs be allergic to certain proteins?	37
2.5 Taurine in cats	37

3. Fat in dog food	37	2.2 Extracellular fluid volume	56
3.1 Sources of fat in dog and cat food	38	2.3 Intracellular fluid volume	56
4. Carbohydrates in dog food	38	3. Regulation of electrolytes and body fluids	57
4.1 Fiber from carbohydrates	38	3.1 Effective circulating volume or ECV	57
4.2 Sources of carbohydrates	38	3.2 Antidiuretic hormone	57
4.3 How much carbohydrates require for dog?	39	3.3 Renin–angiotensin–aldosterone axis	58
5. Vitamins in dog food	39	3.4 Atrial natriuretic factor (ANF)	58
5.1 Which vitamins do dogs need?	39	4. Physiology of acid–base balance	58
5.2 Do dogs need vitamin supplements?	40	4.1 Metabolic acidosis	59
6. Minerals in dog food	41	4.2 Respiratory acidosis	59
6.1 Which minerals do dogs need?	41	4.3 Metabolic alkalosis	59
7. Water requirements for dogs	42	4.4 Respiratory alkalosis	59
8. Homemade balanced dog food?	42	4.5 Mixed acid–base imbalances	59
8.1 The right puppy food?	42	4.6 Anion gap	60
9. Classification of pet food based on the nutrient content	43	5. Assessment of imbalances	60
9.1 Complete food	43	5.1 Dehydration (water depletion)	60
9.2 Complementary food	43	5.2 Overhydration (water excess)	60
9.3 Mixer biscuit	43	5.3 Sodium	61
9.4 Snack/treat	43	5.4 Potassium	61
10. Dog food recommendations for overweight dogs	43	5.5 Chloride	62
11. Nutritional strategy to prevent disease in healthy dogs and cats	43	6. Clinical features of fluid and electrolyte balance	62
11.1 Feeding the healthy dog and cat	43	6.1 History	62
11.2 How much to feed?	43	6.2 Clinical signs	62
11.3 How to feed?	44	7. Clinical and pathological indicators of fluid and electrolyte imbalance	63
11.4 What to feed?	45	7.1 Total plasma protein and packed cell volume	63
References	46	7.2 Hyponatremia	63
		7.3 Hypernatremia	64
		7.4 Serum potassium	65
		7.5 Serum chloride	66
		7.6 Osmolality	66
		8. Purpose of fluid therapy	67
		9. Type of fluids	69
		10. Routes of administration	69
		11. Monitoring fluid therapy	69
		12. Contraindications for fluid therapy	72
		13. Discontinuation of fluid therapy	72
		14. Conclusion	72
		References	72
4. Clinical examination and diagnostic perspectives in dogs and cats		6. Collection, preservation processing, and dispatch of samples for disease diagnosis in dogs and cats	
<i>Manisha Mehra, Omprakash Singh, and Jaykumar Desai</i>		<i>P. Gumasta, R.C. Ghosh, P.M. Sonkusale, and P. Kumar</i>	
1. Introduction	47	1. Introduction	75
2. Noninvasive diagnostic tests	47	2. Collection and preservation of specimen for histopathology examination	75
3. Invasive pathology test	48	3. Collection and preservation of specimen for bacteriological examination	76
3.1 Complete blood count (CBC)	48		
3.2 Blood biochemistry	48		
3.3 Blood parasites in dogs	50		
3.4 Urine analysis	50		
3.5 Dog and cat fecal exams	52		
References	53		
5. Maintenance of fluids, electrolytes, and acid–base therapy in dogs and cats			
<i>Abhishek Pathak, Satya Pal Singh, Raktim Saikia, and Preeti Bisht</i>			
1. Introduction	55		
2. Body Fluid compartments	55		
2.1 Total body water	55		

4. Collection and preservation of specimen for virological examination	77	8. Bacteriological examination	98
5. Collection and preservation of specimen for toxicological examination	77	8.1 Isolation of pure culture by streak plate method	98
6. Collection procedure of different biological material/specimen	77	8.2 Gram staining of bacteria	99
7. Processing and dispatch of material	78	8.3 Antibiotic sensitivity test by disc method	99
8. Essential pathological tests for diagnosis of disease in dogs and cats	79	9. Fungal examination	99
8.1 Hematology	79	9.1 Sample collection	99
8.2 Postmortem examination	79	9.2 Lactophenol cotton blue staining of fungi in wet mounts	99
8.3 Serology	79		
8.4 Molecular diagnosis	80		
8.5 PCR	80		
8.6 Reverse transcriptase RT-PCR	80		
8.7 Real-time polymerase chain reaction (real-time PCR, or qPCR)	80		
8.8 Cytopathology	80		
8.9 Histopathology	81		
7. Necropsy procedure and basic laboratory methods in dogs and cats		Section B	
		Clinical diseases of dogs and cats	
<i>Sanjiv Kumar</i>		8. Behavioral disorders of dogs and cats	
1. Necropsy procedure	83	<i>Abrar Ul Haq</i>	
1.1 Postmortem procedure	83	1. Introduction	103
2. Basic laboratory diagnostic procedures	86	2. Noise-related anxiety	103
2.1 Blood examination	86	3. Aggression	105
2.2 Differential leucocyte count (DLC)	88	4. Generalized anxiety disorder (GAD)	106
2.3 Interpretation of DLC	89	5. Obsessive-compulsive disorder (OCD)	107
3. Urine analysis	90	6. Separation anxiety disorder (SAD)	109
3.1 Collection of urine	90	7. Post-traumatic stress disorder (PTSD)	110
3.2 Physical examination of urine	91	8. Behavior problems and pain	111
3.3 Chemical examination of urine	91	9. Issues with vomeronasal organ and behavior	111
3.4 Microscopic examination of urine	92	10. Heart diseases and behavioral issues	112
3.5 Cultural examination of urine	92	11. Some adverse outcomes of drugs prescribed for behavioral disorders	112
4. Diagnostic cytology	94	References	112
4.1 Collection of specimens	94		
4.2 Fixation of the specimen	94		
4.3 Papanicolaou staining	94		
4.4 Interventional cytopathology	94		
5. Diagnostic histopathology	95		
5.1 Cryo-sectioning/frozen sectioning	95		
5.2 Paraffin embedding technique	95		
5.3 Hematoxylin and eosin staining	95		
6. Parasitological examination	96		
6.1 Examination of mites	96		
6.2 Examination of specimens	96		
6.3 Examination of fecal sample	96		
7. Clinical biochemistry	97		
7.1 Hyperbilirubinemia	98		
		9. Respiratory diseases of dogs and cats	
		<i>Abhishek Pathak, Varun Asediya, Pranav Anjaria, and Satya Pal Singh</i>	
		1. Introduction	115
		2. Anatomy and physiology of the respiratory system in dogs and cats	115
		2.1 The structure and function of the upper respiratory tract (nasal passages, sinuses, pharynx)	115
		2.2 The structure and function of the lower respiratory tract (trachea, bronchi, bronchioles, alveoli)	115
		2.3 The role of the respiratory system in gas exchange and regulation of blood pH	116
		3. Pathogenic agents that cause respiratory diseases in dogs and cats	116
		3.1 Overview of common pathogens causing respiratory diseases	116

3.2 Modes of transmission for respiratory pathogens	116		
4. Host defense mechanisms in respiratory diseases in dogs and cats	116		
4.1 Mucociliary clearance	116		
4.2 Immune response	117		
4.3 Inflammatory response	117		
4.4 Antimicrobial peptides	117		
5. Common respiratory diseases in dogs	117		
5.1 Canine infectious respiratory disease complex	117		
5.2 Canine influenza	118		
5.3 Canine distemper	118		
5.4 Canine parainfluenza virus	119		
6. Common respiratory diseases in cats	121		
6.1 Feline upper respiratory infection	121		
6.2 Feline asthma	121		
6.3 Feline calicivirus	123		
6.4 Feline herpesvirus-1	126		
7. Recent advancement in the respiratory disease diagnosis	128		
7.1 Immunological and pathological aspects	128		
7.2 Biological and chemical analysis	132		
7.3 Genetic and cellular aspects	133		
7.4 Physiological aspects	134		
7.5 Clinical aspects	135		
7.6 Environmental and behavioral aspects	136		
7.7 One health aspects	138		
7.8 Economic and societal aspects	139		
8. Conclusion and future directions	139		
References	139		
10. Urinary system diseases of dogs and cats			
<i>Ramesh Putchakayala and Haritha G S</i>			
1. Introduction	147		
2. Urinary tract infections in dogs and cats	147		
2.1 Bacterial urinary tract infection	147		
2.2 Fungal urinary tract infection	148		
2.3 Viral urinary tract infection	148		
3. Clinical signs	148		
4. Diagnosis	148		
5. Treatment	149		
6. Urolithiasis	149		
6.1 Clinical signs and diagnosis	149		
6.2 Treatment and management of uroliths	153		
7. Urinary tract tumors	154		
8. Chronic kidney disease	154		
8.1 Clinical signs	155		
8.2 Diagnosis	155		
8.3 Management of CKD	158		
8.4 Prognosis of CKD	160		
9. Acute kidney injury	160		
References	161		
11. Diseases of the reproductive system of male dogs and cats			
<i>Ashok Kumar Chaudhary, Govind Narayan Purohit, Sunita Choudhary, and Hemlata</i>			
1. Diseases of testes and epididymis	163		
1.1 Cryptorchidism	163		
1.2 Orchitis/epididymitis	164		
1.3 Brucellosis	166		
1.4 Testicular neoplasm	168		
1.5 Testicular torsion/spermatic cord torsion	169		
2. Diseases of the prostate	170		
2.1 Benign prostatic hypertrophy/hyperplasia	170		
2.2 Prostatitis	171		
2.3 Prostatic cysts	173		
2.4 Prostatic neoplasia	173		
3. Diseases of penis and prepuce	174		
3.1 Balanoposthitis	174		
3.2 Phimosis and paraphimosis	174		
3.3 Priapism	175		
3.4 Penile neoplasia	175		
References	175		
12. Autoimmune diseases of dogs and cats			
<i>Ahmed Abd El-Fattah Doha</i>			
1. Induction of autoimmunity	181		
2. Normal immune responses	181		
2.1 Antigen hidden in cells or tissues (cryptic antigens)	182		
2.2 Antigen generated by molecular changes	182		
2.3 Receptor editing	183		
3. Abnormal immune responses	183		
3.1 Failure of regulatory control	183		
3.2 Infection-induced autoimmunity	186		
3.3 Microchimerism	186		
4. Predisposing factors	186		
4.1 Genetic predisposition	186		
4.2 Breed predispositions	187		
4.3 Intestinal microbiota	187		
5. Mechanisms of tissue damage in autoimmunity	187		
5.1 Type I hypersensitivity	188		
5.2 Type II hypersensitivity	188		
5.3 Type III hypersensitivity	188		
5.4 Type IV hypersensitivity	188		
6. Autoimmunity and autoimmune disease in dogs and cats	188		
6.1 Dog autoimmune disease	188		
6.2 Rheumatoid arthritis (RA)	188		
6.3 Systemic lupus erythematosus (SLE)	189		

6.4 Autoimmune skin disease	189	3.4 Cardiac catheterization	207
6.5 Autoimmune hemolytic anemia (AIHA)	190	3.5 Echocardiography	207
6.6 Autoimmune thrombocytopenia (AITP)	190	3.6 Doppler echocardiography (DE)	208
6.7 Insulin-dependent diabetes mellitus (IDDM)	190	3.7 Cardiac biomarker	209
6.8 Addison's disease	190	3.8 Treatment	210
6.9 Lymphocytic thyroiditis	190	3.9 Common drugs used	210
6.10 Myasthenia gravis	191	References	211
6.11 Vogt-Koyanagi-Harada syndrome	191		
6.12 Polymyositis	191		
6.13 Autoimmune masticatory myopathy	191		
6.14 Cat autoimmune disease	191		
6.15 Granulomatous diseases of infectious etiology	192		
6.16 Gammopathies (dysproteinemias or paraproteinemias)	192		
6.17 Polyclonal gammopathy	192		
6.18 Monoclonal gammopathy	192		
6.19 Organ-specific autoimmune diseases	192		
7. Hormonal influence on autoimmunity	193		
8. Primary vs secondary autoimmune disease	193		
8.1 Drugs and vaccines as triggers for autoimmunity	193		
8.2 Environmental triggers of autoimmunity	194		
8.3 Infectious triggers of autoimmunity	194		
8.4 Inflammatory response might lead to damage	195		
9. Immunodiagnostic tests for autoimmunity	195		
10. Immunodiagnostic tests for autoimmunity	195		
10.1 Antinuclear antibody test	196		
References	196		
13. Diseases of cardiovascular system of dogs and cats			
<i>S. Yogeshpriya</i>			
1. Introduction	199		
2. Congenital heart diseases	199		
2.1 Subaortic stenosis	199		
2.2 Pulmonic stenosis (PS)	200		
2.3 Dysplasia of the atrioventricular valves (DAV)	201		
2.4 Patent ductus arteriosus (PDA)	202		
2.5 Ventricular septal defects (VSD)	203		
2.6 Tetralogy of fallot (TF)	203		
2.7 Eisenmerger's syndrome (ES)	204		
2.8 Atrial septal defects (ASD)	204		
2.9 Atrioventricular canal defects (AVC)	204		
3. Acquired heart diseases	204		
3.1 Diagnosis	205		
3.2 Thoracic radiography	205		
3.3 Electrocardiography	206		
		14. Diseases of reproductive system of female dogs and cats	
		<i>Ashok Kumar Chaudhary, Govind Narayan Purohit, Amit Kumar, and Sandeep Dholpuria</i>	
		1. Diseases of ovary	215
		1.1 Ovarian cyst	215
		1.2 Ovarian remnant syndrome	216
		1.3 Ovarian neoplasia	218
		2. Diseases of uterus	219
		2.1 Cystic endometrial hyperplasia pyometra complex	219
		2.2 Metritis	221
		2.3 Subinvolution of placental sites	221
		2.4 Uterine neoplasia	222
		3. Diseases of vagina	222
		3.1 Vaginal fold prolapse	222
		3.2 Vaginal neoplasia	223
		4. Other diseases	225
		4.1 Canine pseudopregnancy	225
		References	225
		15. Diseases of endocrine system in dogs and cats	
		<i>Ambica Gadige, Aruna Maramulla, Mohanambal Kaliyan, Anil Kumar Banothu, and Satish Kumar Karlapudi</i>	
		1. Introduction	229
		2. Hypothyroidism	229
		2.1 Anatomy and pathophysiology	229
		2.2 Clinical signs	229
		2.3 Diagnosis	231
		2.4 Treatment	232
		3. Hyperthyroidism	232
		3.1 Clinical signs	232
		3.2 Diagnosis	232
		3.3 Treatment	232
		4. Diabetes mellitus	232
		4.1 Factors and pathophysiology	232
		4.2 Clinical signs	233
		4.3 Diagnosis	233
		4.4 Treatment	234
		5. Hyperadrenocorticism (HAC) (or) Cushing's syndrome	234
		5.1 Factors and pathophysiology	234

5.2 Clinical signs	235		
5.3 Diagnosis	235		
5.4 Treatment	235		
6. Hypoadrenocorticism (or) Addison's disease	235		
6.1 Clinical signs	235		
6.2 Therapy	235		
7. Primary hypoparathyroidism	235		
8. Primary hyperparathyroidism	236		
9. Secondary hyperparathyroidism	236		
10. Hyperaldosteronism in cats	236

20. Diseases of ear in dogs and cats

Ambica Gadige, Srujan Racharla, Lokesh Lella, and Anil Kumar Banothu

1. Introduction	297
2. Anatomy of ear of dogs and cats	297
2.1 Anatomy of external ear	297
2.2 Anatomy of middle ear	297
2.3 Anatomy of internal ear	298
3. Diseases of external ear	298
3.1 Otitis externa	298
3.2 Aural hematoma	303
4. Disease of middle ear (or) otitis media	303
4.1 Risk factors	303
4.2 Clinical signs	304
4.3 Diagnosis	304
4.4 Treatment	304
5. Disease of inner ear (or) otitis interna	305
6. Deafness	305
6.1 Causes of deafness	305
6.2 Diagnosis	305
6.3 Therapy	306
7 Aural neoplasia	306
References	306

21. Overview on diseases of blood and hematopoietic system in dogs and cats

K. Karthika and S. Poobitha

1. Hematopoietic system in animals	309
2. Red blood cells in animals	309
2.1 Absolute erythrocytosis	310
2.2 Anemia in dogs and cats	311
3. White blood cells in animals	312
3.1 Decreased hematopoietic marrow cell production	313
3.2 Five distinct stages in the process of phagocytosis have been identified	313
4. Lymphocytes in animals	313
5. Platelets in animals	314
5.1 Thrombocytopathies	314
5.2 Bleeding disorders in dogs and cats	315
5.3 Primary hemostasis	315

5.4 Secondary hemostasis	315
5.5 Diseases of primary hemostasis	316
5.6 Disorders of coagulation	317
6. Neoplasia of the myeloid system	317
6.1 Lymphoid system neoplasia	317
6.2 Anatomic pattern	318
6.3 Leukemic form (lymphocytic leukemia)	318
6.4 Other miscellaneous forms of malignant lymphoma	318
6.5 Histologic classification	319
References	319

22. Diseases and disorders of the musculoskeletal system in dogs and cats

K. Karthika and P.K. Ramkumar

1. Myopathies	321
2. Myositis	321
2.1 Definition	321
2.2 Causes	321
2.3 Tendinitis	321
3. Prevention of musculoskeletal disorders	321
4. Bone disorders in dogs	321
4.1 Hypertrophic osteodystrophy	322
4.2 Pediatric bone diseases (panosteitis)	323
4.3 Avascular necrosis of the femoral head	324
4.4 Multiple cartilaginous exostosis	324
4.5 Slipped capital femoral epiphysis	325
5. Joint disorders in dogs	325
5.1 Clinical signs of musculoskeletal disorders	325
5.2 Lameness examination	326
6. Congenital musculoskeletal disorder	326
7. Immune-mediated arthritis	327
7.1 Myopathies	327
8. Canine diskospondylitis	329
9. Therapy for musculoskeletal system disorder	331
9.1 Applications in the musculoskeletal system	331
10. Musculoskeletal disorders of cats	331
10.1 Inherited and developmental disorders	331
10.2 Bone disorders in cats	331
10.3 Joint disorders in cats	332
10.4 Muscle disorders in cat	332
11. Diagnosis and treatment of musculoskeletal disorders in dogs and cats	334
11.1 Diagnostic approach	335
11.2 Therapeutic management	335
11.3 Ultrasonic beam therapy	336
References	336

23. Geriatric diseases of dogs and cats

Abhishek Pathak, Varun Asediya, Pranav Anjaria, and Satya Pal Singh,

1. Introduction	339
2. Neural basis of cognitive decline in domestic dogs and cats during aging	339
2.1 Brain structure and function in aging	340
